Intswelo yeCl Inhibitor inokubangela:

- Ukudumba kwesikhumba
- Iintlungu esiswini ezibangelwa kukudumba kwenwebu yesisu, yaye kungabangela ukugabha
- **Ukudumba komqala / ukuvaleka kwendlela yokuhamba umoya (ukuphefumla nzima okanye ukutswina) okunokukhokelela ekufeni ngenxa yokufuthaniseleka**

Iimpawu zisenokuya zisiba mbi kancinci kancini okanye zikhawuleze gqirha.

Ngokuqhelekileyo zihlala usuku olu-1 ukuya kwezi-3, okanye ngaphezulu.

Unyango oluchanekileyo lokudumba kakhulu kweendawo zokuhambisa umoya kunye/okanye ukuhlaselwa sisisu kukufumana ngoko nangoko isifofu se-fresh frozen plasma (FFP).

Ngexesha lokuhlaselwa ngamandla, unyango olungxamisekileyo kulo mguli yi-fresh frozen plasma 10 ml/kg IV infusion kwimizuzu eli-10.

Unyango lweFFP lunokuphindaphindwa ukuba kuyimfuneko. Abaguli bamele banyangwe ngoko nangoko yaye bakuba bebhetelana badluliselwe kwisibhedlele seziko lemfundo ephakamileyo.

Nokuba ngaba umguli akabonisi miqondiso yeengxaki zokuphefumla umele asiwe ngokungxamisekileyo kwisibhedlele seziko lemfundo ephakamileyo.

Kusisinyanzelo ukuba abekw' esweni ngokungqongqo yaye kufanele kucingwe ngokufakwa kwemibhobho xa kubandakanyeke ingqula.

Ngokuqhelekileyo iicorticosteroid nee-antihisthamine azisebenzi kolu hlobo lwe-*angioedema*.

Umntu weli khadi ukhathazwa yi-angioedema, ngenxa yentswelo yeCl Inhibitor
