ANNEXURE A **COMPETENCY STANDARDS FOR CPD** ................................................................. 43
1. Introduction

The practical training year is extremely important to the pharmacy graduate. The pre-registration programme, developed by the South African Pharmacy Council (Council), lays the foundation for the internship year and provides the pharmacy graduate with an opportunity to gain practical experience and knowledge in a practice setting. It is also the year in which the tutor nurtures and guides the intern towards adopting a specific approach and attitude towards the practice of the pharmacy profession.

The internship extends over a **minimum period of twelve months**, or periods of not less than twelve months in the aggregate, in terms of the Pharmacy Act, 53 of 1974. In terms of the Act, **the internship can only commence after registration with Council**. Prior to the registration of the intern, Council must approve the tutor and the pharmacy or institution as a training site. At the end of the internship period, the intern should have had exposure to the practice of pharmacy and be able to practise as a competent professional.

The pre-registration programme is based on a set of exit level outcomes (ELO) which describe the knowledge, skills and attitudes required of an entry-level pharmacist. During the year, the intern should gain the technical skills to augment the knowledge they acquired during their undergraduate study periods.

This manual is designed to assist, in a structured manner, the interns in their preparation for a career as professional pharmacists and equip them to:

- apply legal and ethical principles in their activities
- demonstrate a holistic approach to and accept responsibility for professional actions
- obtain knowledge and expertise in conducting a patient-orientated health service
- develop communication skills to enable them to interact with patients and members of a healthcare team
- gain knowledge of the general aspects of healthcare, with particular emphasis on the South African situation, and the role of the pharmacist in the promotion of health and prevention of illness
- make sound decisions relating to drug-related problems
- apply the principles of pharmaceutical care to achieve definite therapeutic outcomes for the health and quality of life of a patient
- plan and manage personal programmes in terms of workflow and tasks
- apply knowledge of products used in pharmacist initiated care and maintain the same diligence required for the dispensing of prescribed medicines
- manage personnel and work as part of a team, both within the pharmacy and with members of a healthcare team.

The objectives of this manual are to:

- clarify requirements for the pre-registration year
- emphasise the responsibilities and the role of both the intern and the tutor
- provide a timetable with the most important dates for the year
- explain the manner of assessment of the progress and performance of the intern
- inform interns of the relevant application forms and online procedures that are required during internship
• provide information regarding the various professional organisations and other pertinent information.

The fifth year of the education and training of a pharmacist is of such a hands-on nature that the responsibility for training lies, to a large extent, with the tutor. Council endeavours to assist both the intern and the tutor through this manual, which offers a structured training programme and methods of assessment to measure the progress of the pharmacist intern.
2. Guidelines for the pre-registration year

This manual is a guide for pharmacist interns and tutors to ensure a successful pre-registration experience. Its aim is to explain the purpose and contents of the programme, the role of the tutor and the intern, as well as the assessment of an intern’s performance.

In terms of the programme for the pre-registration year, the following should be noted:

• an introduction (orientation) period of two weeks should be allowed;

• Council will organise an information session (intern/tutor workshop) which must be attended by both tutors and interns. These will take place in each province between Feb and May 2017. Interns and tutors must RSVP online on Council’s website for the event. Please note that all registered active interns should attend the workshops annually as guidelines, assessment criteria and timetables may change;

• the list of competency standards (CS) should be used as a guideline for training (refer to annexure A);

• progress reports (see section 3.3) on the skills and knowledge obtained by the intern, as well as their personal development, must be submitted during the year as reflected online;

• online submission of a continuing professional development (CPD) portfolio is required (see section 3.2);

• the intern should attend at least two continuing education sessions;

• the tutor is responsible for confirming that the education and training was conducted to their satisfaction at the end of the internship;

• all interns must successfully complete the pre-registration examination (two examination papers) (see section 3.1);

• to qualify for a pre-registration examination, interns should have completed at least six months of internship, submitted at least four CPD entries, and had one progress report submitted by the tutor; and

• to qualify for a re-examination and for interns who are registered for a period of 9 months, interns should have submitted at least eight CPD entries, and had three progress reports submitted by the tutor.

It is strongly recommended that exposure to other sectors of pharmacy takes place during the internship period. For example, community pharmacy interns be exposed to hospital pharmacy and vice versa. Interns should also receive exposure to different aspects within the training facility. Pharmacist interns should thus spend time on a rotational basis in various different areas in a hospital or an approved community pharmacy. The approved tutor remains responsible for the training of the intern during such rotations.

2.1 GENERAL REQUIREMENTS AND CONDITIONS FOR INTERNSHIP

The period of internship for all sectors extends over a period of at least 12 months. Leave may be taken in accordance with the Basic Conditions of Employment Act, 75 of 1997. Allowance is made for sick leave and other types of leave as applicable. Legislation pertaining to the internship is found
in the Pharmacy Act, 53 of 1974, and in the Regulations relating to pharmacy education and training and the Regulations relating to the registration of persons and the maintenance of registers.

No person may commence internship unless:

- they are duly registered with the SAPC as a pharmacist intern
- a contract has been entered into by and between the tutor and the prospective pharmacist intern and the pharmacy or institution registered as a provider of a qualification in pharmacy (academic institution) at which the internship will take place
- the tutor and the training premises have been approved.

### 2.2 THE ROLE OF THE TUTOR

One of the most important responsibilities of the tutor is to be a role model and mentor in all aspects of practice, with emphasis on the values and attributes of a pharmacist. Pharmacists should not only be competent to perform certain functions and tasks but be able to perform these tasks with a specific attitude and set of values. Tutors must take particular care to observe the requirements of the Pharmacy Act, 53 of 1974, including the applicable rules and regulations, the code of conduct of the profession, and other applicable legislation.

In being aware of the responsibility to educate and train the new graduate in an appropriate and responsible manner, the tutor should supply the required equipment, materials, programmes, access to information systems and literature as necessary. Tutors should also participate in CPD on a regular basis and attend continuing education courses as well as the intern/tutor workshops conducted by Council. It should be kept in mind that the intern will be in possession of theoretical knowledge and will require the assistance in the application thereof. The CPD will assist in ensuring that tutors practise competently and in a manner that will provide an effective role model for the intern.

The tutor should furthermore be available to assist the intern in the performance of day-to-day tasks and to provide guidance in the development of an independent, responsible decision-maker on matters affecting the health of the public. It is assumed that all tutors can benefit from exposure to courses on, for example communication and counselling skills.

The ultimate responsibility for passing the competency evaluation lies with the pharmacist intern. The tutor should, however, also realise that a specific standard should be maintained. The assessments that must be conducted throughout the year are thus of particular importance as a measure of the progress being made by the intern.

### (a) Internships conducted in academic institutions and manufacturing pharmacies

The internship must include a period of not less than 400 hours of practical training at a community or institutional (hospital) pharmacy approved by Council for such training. The tutor at the academic institution or manufacturing pharmacy must make the necessary arrangements for and keep a record of the 400 hours of practical training. The **400 hours of practical training must be done over periods of at least five consecutive (eight hour) days.**

The pharmacist supervising the 400 hours of practical training must complete online the Declaration of completion of 400 hours.
(b) Internship programme in hospital complexes (public sector hospital complexes)

Interns may be allowed to rotate in hospital complexes (i.e. where hospitals have been grouped together in healthcare complexes and/or provide healthcare services in collaboration with community healthcare centres or primary healthcare clinics) under the following conditions:

- there must be at least one approved tutor responsible for the effective practical training of the pharmacist intern concerned;
- facilities (hospital pharmacies) where the intern would be rotating must be approved and recorded by Council and each facility must have a pharmacist to supervise the internship;
- the facility (hospital pharmacy) where such rotation would take place for purposes of practical training, the period(s) that such services would be provided, as well as the name of the pharmacist under whose supervision the intern would work, must be clearly indicated/described in the contract to be approved by Council before the internship commences;
- the rotation must be for purposes of practical training only; and
- an approved tutor may not delegate the supervisory function to the community service pharmacist.

2.3 CESSION OF CONTRACT

Section 15 of the Regulations relating to education and training contains the requirements for cession of contract between the tutor and the pharmacist intern. According to this section of the regulations, an internship contract may be ceded to another approved tutor at the same pharmacy/institution or at another approved pharmacy/institution. Such cession may occur in the event of:

- the death of the tutor, the sequestration of their estate, their conviction of a serious offence, their suspension or the removal of their name from the register of pharmacists;
- the discontinuation of practise of the tutor or the resignation of the tutor from the pharmacy or institution approved for an internship;
- the closure of the pharmacy or institution;
- mutual consent between the tutor and the pharmacist intern for a reason which is acceptable to the registrar; or
- any other reason that Council may deem fit.

Only the period of internship undertaken by an intern under the original registered tutor and the new registered tutor will be recognised by Council.

A pharmacist intern who intends to cede a contract to another tutor must, at least seven days before such cession, submit the applicable documents to Council. These documents include:

- the application for cession of contract of internship;
- the applicable cession fee; and
- the tutor application (if not approved).

Cession of an internship contract may only occur once the prospective new tutor has been approved by Council as a tutor. Any periods that an intern spends in a pharmacy which was not approved for purposes of training will not be recognised by Council as part of the internship period. The applicable forms, which must be completed in the case of a cession of contract, are available on the SAPC website under the tab “For professionals”.

5
2.4 REMOVAL OF NAME FROM THE REGISTER

In terms of section 11 of the Regulations relating to registration of a person and maintenance of registers, the Registrar may remove from the register of pharmacist interns the name of a pharmacist intern who:

- has completed their internship to the satisfaction of the Council;
- has not completed their internship to the satisfaction of the Council;
- has discontinued their internship with the consent of the Council;
- no longer complies with the requirements and conditions for registration as a pharmacist intern; or
- is deceased.

A person whose name has been removed from the register will be notified thereof and any registration certificate issued shall be deemed to be cancelled.

2.5 RESTORATION OF NAME TO THE REGISTER

A pharmacist intern whose name has been removed from the register may have their name restored to the register by submitting to the Registrar:

- a duly completed application form for restoration of their name to the register;
- acceptable documentary evidence that they comply with the conditions under which they may be registered as a pharmacist intern; and
- acceptable documentary evidence from a tutor to the effect that they have resumed their internship.

2.6 REGISTRATION AS A PHARMACIST IN SOUTH AFRICA

To practise as a pharmacist in the Republic of South Africa, registration as a pharmacist with the South African Pharmacy Council is required. It is an offence to practise as a pharmacist if you are not registered as such. All persons who wish to register as a pharmacist for the first time are obliged to perform one year of pharmaceutical community service in a public sector institution. This requirement was implemented with effect from 20 November 2000. Further information regarding community service may be obtained from the Department of Health.

All pharmacist interns will be required to have passed the pre-registration evaluation before registering as pharmacists for purposes of performing pharmaceutical community service.

Once a pharmacist intern has submitted the documents and the fees referred to below, they will be registered as a pharmacist and issued with a registration certificate. They will, however, only be able to practise as a pharmacist for purposes of performing pharmaceutical community service and for a maximum period of two years. The Council will revoke the conditions of registration referred to above once the pharmacist has submitted a report from the relevant health authority that they have satisfactorily completed the period of pharmaceutical community service in terms of the Act. No additional fee will be imposed for revoking the conditions of registration.

Application for registration as a pharmacist for purposes of performing pharmaceutical community service could be delayed if Council does not receive all the required documents and the prescribed fees.
The contract entered into between the employer and the pharmacist intern should not necessarily be terminated after twelve months from the date of commencement, especially if the pharmacist intern has not successfully completed the pre-registration evaluation. The reason for this is that a pharmacist intern who has not successfully completed the pre-registration evaluation will require the same environment to complete their portfolio or period of practical training.

Please note that once the tutor has signed off the intern, the intern may no longer practise as a pharmacist intern, a pharmacist's assistant or as a pharmacist until registered for community service. According to Chapter 2 of the Pharmacy Act, 53 of 1974, no person shall be entitled to provide the services which form part of the services specially pertaining to the scope of practice of a pharmacist or assist therewith, unless he or she is duly registered in one of the categories prescribed in terms of this Act. None compliance to this regulation is a contravention of the Pharmacy Act.

Registration is effected when all the documentation listed below, correctly certified and completed fully, and the prescribed fees have been received by Council:

- any outstanding assessment forms/progress reports (12, 24, 36 and 45 weeks);
- summary of outcomes achieved form signed by tutor and pharmacist intern;
- application form for registration as a pharmacist;
- certified copy of the intern's qualification in pharmacy (BPharm degree certificate), or confirmation that the intern holds a qualification in pharmacy, submitted directly to Council by a provider of a qualification in pharmacy;
- certified copy of a master's degree certificate in the study approved by Council, or other documentary evidence acceptable to the Registrar, that the intern has satisfied the requirements of the institution for the awarding of at least a master's degree (academic interns only);
- certified copy of identity document or passport;
- documentary evidence of the name of the public health facility or complex of health facilities where the applicant has been placed to perform pharmaceutical community service and the date on which community service will commence (copy of letter of appointment/employment);
- declaration of completion of 400 hours of practical training (academic interns and interns in manufacturing pharmacy only);
- an endorsement letter for registration as a pharmacist obtained from the Department of Health Foreign Workforce Management Programme (non-South Africans only); and
- registration fee and annual fee.

Please note:
The registration date for persons who are eligible to register as pharmacists for purposes of performing pharmaceutical community service, i.e. those who have completed their internship, is as follows:

- The date on which community service will commence is the date indicated on the letter of appointment or placement received from the relevant health authority.
- In cases where all the relevant documentation/fees have not been received before this date, the date on which Council received the last document or fee required for purposes of registration in terms of the Regulations relating to the registration of persons and the maintenance of registers.
- A pharmacist intern will not be eligible for registration as a pharmacist before a period of at least twelve months has elapsed from the date of registration as a pharmacist intern.

Copies of all forms that may be required during the internship are available on Council's website under the Customer Services Tab.

All declarations must be signed by a Commissioner of Oaths.
3. Pre-registration evaluation

Persons who wish to register as pharmacists in South Africa are required to complete the pre-registration evaluation prior to registration as a pharmacist for purposes of performing pharmaceutical community service. The pre-registration evaluation for pharmacist interns for 2017 consists of three components:

- written pre-registration examination;
- online submissions of CPD activities; and
- progress reports.

Competency and the exit level outcomes

The evaluation of competency is based on the exit level outcomes (ELOs) developed for the pharmacy profession. These ELOs form the basis of the (new) BPharm curriculum registered with the South African Qualifications Authority (SAQA) and contain all the knowledge, skills and attitudes required by the entry-level pharmacist. Although it is not always directly evident how the combination of knowledge, skills and attitudes contribute to the demonstration of competency, an extensive knowledge of the principles of pharmacy is essential to enable the pharmacist to apply their skills in effectively dealing with the demands of pharmacy practice in the various sectors of the profession.

The following ELOs describe the essential knowledge and skills:

ELO 1: Integrate and apply foundational scientific principles and knowledge to pharmaceutical sciences
ELO 2: Apply integrated knowledge of product development and formulation in the compounding, manufacturing, distribution and dispensing of pharmaceutical products
ELO 3: Compound, manipulate and prepare medication in compliance with Good Pharmacy Practice (GPP) rules, Good Manufacturing Practice (GMP) and/or Good Clinical Practice (GCP) guidelines
ELO 4: Manage the manufacture, packaging and registration of pharmaceutical products in compliance with GMP and GCP
ELO 5: Manage the logistics of the selection, procurement, storage, distribution and disposal of pharmaceutical products
ELO 6: Dispense medication and ensure optimal pharmaceutical care for the patient in compliance with GPP and, where applicable, GCP
ELO 7: Apply a pharmaceutical care management approach to ensure rational medicine use
ELO 8: Initiate and/or modify therapy, where appropriate, within the scope of practice of a pharmacist and in accordance with GPP and GCP, where applicable
ELO 9: Promote public health
ELO 10: Integrate and apply management principles in the practice of pharmacy
ELO 11: Participate in research.
The associated assessment criteria for the exit level outcomes are:

ELO 1: Integrate and apply foundational scientific principles and knowledge to pharmaceutical sciences

1.1 Physical, chemical and biological principles are integrated and applied in the development, formulation, compounding, manufacturing, drug supply management and dispensing of pharmaceutical products.

1.2 Anatomical, physiological, biochemical and pathophysiological principles and knowledge are integrated and applied in the initiation and/or modification of therapy and provision of pharmaceutical care.

1.3 Social and behavioural principles and knowledge are integrated and applied in the initiation of therapy and provision of pharmaceutical care.

ELO 2: Apply integrated knowledge of product development and formulation in the compounding, manufacturing, distribution and dispensing of pharmaceutical products

2.1 Physicochemical and biopharmaceutical principles are applied in the formulation and development of pharmaceutical products.

2.2 Physical, chemical and biological principles are applied in the manufacturing, compounding and quality assurance of pharmaceutical products.

2.3 Physicochemical and biopharmaceutical principles are applied in compounding and dispensing of pharmaceutical products.

2.4 Pharmaceutical product integrity is maintained during storage and distribution according to GPP.

ELO 3: Compound, manipulate and prepare medication in compliance with Good Pharmacy Practice (GPP) rules, Good Manufacturing Practice (GMP) and/or Good Clinical Practice (GCP) guidelines

3.1 Standard operating procedures (SOPs) are generated and implemented in compliance with GPP.

3.2 Pharmaceutical preparations are compounded in accordance with GMP.

3.3 Sterile admixtures are produced in accordance with aseptic techniques and principles of GMP and GPP.

3.4 Records are generated for each of the preparations produced according to organisational procedures and legal requirements.

ELO 4: Manage the manufacture, packaging and registration of pharmaceutical products in compliance with GMP and GCP

4.1 Medicines registration dossiers for pharmaceutical products using the supplied data and documentation are compiled in accordance with the current relevant legislation.

4.2 Master production documentation for the manufacture of pharmaceutical products is interpreted in terms of GMP.

4.3 The GMP requirements for generation and reconciliation of batch manufacturing documents are described.

4.4 Dosage forms are manufactured on a laboratory scale according to plan and standard operating procedures.

• Range of dosage forms includes, but is not limited to: > solid, liquid, semi-solid, sterile and non-sterile.

4.5 Packaging labelling and package inserts are contextualised according to the product, GMP and the current relevant legislation.

4.6 A quality management system (QMS) is critically evaluated in accordance with GMP.
• Range of aspects of QMS includes, but is not limited to: > quality assurance (QA) and quality control procedures, in-process controls, validation, qualification and Good Laboratory Practice (GLP).

ELO 5: Manage the logistics of the selection, procurement, storage, distribution and disposal of pharmaceutical products

5.1 The selection of medicines and related products is managed according to rational scientific and evidence-based principles and patient needs.
   ▪ Range of selection criteria includes, but is not limited to: > morbidity, pharmacoepidemiological data, quality medicine products, bioavailability, therapeutic equivalence, generic equivalence and pharmacoeconomic data and availability.

5.2 The quantity of medicines needed is identified according to standard methods.
   ▪ Range of methods includes, but is not limited to: > patient morbidity, standard treatment guidelines and the adjusted consumption method.

5.3 The procurement of medicines and related products is managed according to organisational policies and procedures.
   ▪ Range of procurement criteria includes, but is not limited to: > vendor qualification, reliability and cost effectiveness.

5.4 Pharmacoeconomic knowledge, principles, models and theories are applied in the provision of cost-effective therapy and pharmaceutical services.

5.5 The storage and distribution of medicines and related products is managed according to GPP, Good Distribution Practice (GDP) and Good Wholesaling Practice (GWP).
   ▪ Range of storage and distribution considerations includes, but is not limited to: > storage conditions, security, pest control and storage space.

5.6 Disposal of expired and unwanted pharmaceutical products is managed according to current relevant legislation and guidelines.

ELO 6: Dispense medication and ensure optimal pharmaceutical care for the patient in compliance with GPP and, where applicable, GCP

6.1 The prescription is evaluated in terms of the appropriateness of the prescribed medication according to GPP.
   ▪ Range of evaluation criteria includes, but is not limited to: > indications, dosage, safety, possible contraindications, interactions, treatment duplication, legal and economic implications.

6.2 Medicines are prepared and labelled in accordance with GPP and current legislative requirements.

6.3 Appropriate drug information sources and information systems are accessed and the relevant information communicated to the patient and/or carer in order to optimise therapeutic outcomes.

6.4 A pharmaceutical care plan, including design, implementation and monitoring, is developed in collaboration with other healthcare professionals and the patient.

6.5 Records are kept in accordance with the GPP and current legislative requirements.
ELO 7: Apply a pharmaceutical care management approach to ensure rational medicine use

7.1 The philosophy and principles of pharmaceutical care are demonstrated in terms of optimising therapeutic outcomes for a specific patient.
7.2 A pharmaceutical care management approach is applied in collaboration with other healthcare professionals and the patient.
7.3 Rational drug use is facilitated by applying pharmaceutical care, medicine utilisation reviews and the principles of pharmacoeconomics.
7.4 Pharmacovigilance is practised and adverse drug events are reported.

ELO 8: Initiate and/or modify therapy, where appropriate, within the scope of practice of a pharmacist and in accordance with GPP and GCP, where applicable

8.1 Relevant clinical information and history is obtained from the patient.
8.2 Appropriate advice, including referral, and/or medicines are supplied for specific symptoms according to GPP and principles of pharmaceutical care.
8.3 In the case of possible medicine interactions, or any other possible contraindications, appropriate modification of therapy is suggested in consultation with the prescriber.
8.4 Appropriate records are kept and therapeutic outcomes monitored in accordance with GPP and principles of pharmaceutical care.

ELO 9: Promote public health

9.1 Advice on health promotion, disease prevention and disease management is provided in terms of use of medicinal and non-medicinal options.
9.2 Tools are designed to inform the public on healthcare and lifestyles, health promotion, disease prevention, disease management and medicine usage, in addition to enabling the recognition and management of risk factors.
9.3 Promotive health services are offered in terms of current health policy, epidemiological information and current legislative requirements.
9.4 The public is assisted to recognise and manage health risk factors in terms of medication and disease states.
9.5 Screening tests are used to assist in counselling, therapeutic intervention, referral and early detection of disease.
9.6 Appropriate records are kept and therapeutic outcomes monitored in accordance with GPP and pharmaceutical care principles.

ELO 10: Integrate and apply management principles in the practice of pharmacy

10.1 Basic financial management principles are applied in the practice of pharmacy.
10.2 Human resource management principles are applied in the practice of pharmacy.
10.3 Strategic management principles are applied in the practice of pharmacy.
10.4 Marketing management and change management principles are applied in the practice of pharmacy.
10.5 Logistics management principles are applied throughout the medicines supply chain.
10.6 Relationships with patients, caregivers and other healthcare professionals and workers are managed in accordance with professional practice standards.
10.7 Risk management principles are applied in the practice of pharmacy.
10.8 Quality improvement principles and strategies are continuously applied.

ELO 11: Participate in research
11.1 The principles of quantitative and qualitative research are explained.

11.2 A research proposal is formulated.
   - Range of formulation requirements includes, but is not limited to: delineating the problem selecting the research methodology, conducting literature review and structure.

11.3 Research is conducted ethically in accordance with established research methodology practice.
   - Range of research conducted includes, but is not limited to: gathering and processing, capturing, and interpreting information.

11.4 Findings and conclusions are presented in oral and written formats in accordance with established research practice.

3.1 WRITTEN PRE-REGISTRATION EXAMINATION

The pre-registration examination is held three times a year, in March/April, July and October. From 2017, the pre-registration examinations will be conducted online. Training on the online examinations will be provided during the intern / tutor workshops in March and June 2017. The March 2014 examination paper is available online on the secured site of the SAPC website for interns to practice.

Pharmacist interns attempting the pre-registration examination for the first time will only be allowed to sit for the examination after completing the first six months of their internship and submitting online at least four CPD entries. Interns registered for nine (9) months or more must submit eight (8) CPD entries and tutor to submit three progress reports to be eligible to write the examination.

No fee will be charged for the first and second attempt at the examination. Interns will, however, be charged a fee for a third and any subsequent attempt at the examination. These fees are published by Council each year and are available on the SAPC website.

The pre-registration examination consists of two examination papers (paper 1 and paper 2) written on the same day. Both papers are in a multiple choice format and are open book examinations.

**Paper 1** consists of 40 multiple choice questions only on pharmaceutical calculations. Each calculation will be awarded one mark if correct and zero if incorrect as there is no negative marking. The pass mark for paper 1 is 60%.

**Paper 2** consists of 50 multiple choice questions which include 15 sector specific questions (community pharmacy, hospital pharmacy or manufacturing pharmacy) and 35 general questions. Interns answer only questions for the sector in which they work (community pharmacy, hospital pharmacy or manufacturing). Academic interns may answer community or hospital or manufacturing sector questions. The pass mark for paper 2 is 50%. A pharmacist intern may attempt an examination on any of the scheduled dates. If the intern fails any one of the papers, only that examination paper needs to be rewritten at the next available examination date.

Paper I is written over a duration of two hours (10:00 to 12:00) and paper 2 is written over a duration of three hours (13:30 to 16:30).

Interns are required to book online to write the examination. The booking must be done on the SAPC website (www.sapc.za.org) under the secure site for registered people. On booking, interns are required to select the venue where they will be writing the examination and the sector which they will
be writing. The examination booking must be completed at least **two weeks prior to the examination date.** The examination **results are released six weeks after the examination date.**

Interns, who have not been successful in the pre-registration evaluation after completion of 12 months of internship, may **not be registered as community service pharmacists and therefore may not commence with community service** until they have proof of having completed the pre-registration evaluation successfully. Interns who wish to have their examination re-marked may do so by submitting a duly completed application form (www.sapc.za.org) to the SAPC within a month from the date the results are released. A fee for re-marking of the examination paper is published on the SAPC website and is payable per paper.

(a) **Policy for conducting examinations**

The following policy applies when conducting Council examinations:

- The **invigilator is officially in control of the examination** and must be obeyed on all matters pertaining to the examination.

- Candidates must **present in the examination venue at least an hour before the examination and must be seated 30 minutes before the examination.**

- **Only candidates whose names appear on the official list of candidates who booked to write the examination** in that venue or who produce the written / electronic confirmation of the examination booking in that venue will be admitted to that examination venue.

- Each candidate must produce proof of their identity such as an **identity document, a valid passport or a driver’s license**

- **Cellular phones, tablets and other electronic gadgets may not be used** during any examination.

- Candidates are allowed **15 minutes to read through the paper.**

- Candidates must ensure that their question paper for the examination is correct.

- Candidates must ensure that, for paper 2, the category of pharmacy they are writing is correct.

- There are five (5) answer options per question. There is only one correct answer per question and, therefore, candidates must **mouse-click the most appropriate / correct option** to them.

- The questions are presented in sections (i.e. calculation types for paper 1 and competence standards for paper 2). Sections and questions can be answered in any order.

- Clicking the “Preview” button gives the overview of the paper and allows candidates to complete any unanswered questions and/or review answered questions.
Clicking the “Submit” button completes the examination and candidates cannot go back to the examination questions.

Candidates will not be allowed to exceed the time limit.

If the allocated examination time lapses without the candidate answering all the questions, the completed answers are automatically submitted even if the candidate have not clicked the “submit” button.

Only textbooks will be allowed and candidates may share these through the invigilator. Personal notes are allowed but may not be shared between candidates. Previous examination papers are not allowed in the examination room.

If a candidate attempts to obtain information from another person by any means during the examination, or if any irregularities occur, the invigilator must report this to Council in writing.

Candidates may not leave the examination venue during the examination.

(b) Format of the examination

The examination will be in the form of an open book question paper. For many interns this will be the first open book examination they have written. The approach to an open book examination differs greatly from the traditional closed book examination. The latest edition of any reference may be used during the examination except previous pre-registration examination papers. The following references (the latest editions) are, however, recommended:

- Martindale: The Extra Pharmacopoeia
- South African Medicines Formulary (SAMF)
- Handbook - 128 -k on Injectable Drugs (“Trissel”)
- Textbook of Adverse Drug Reactions
- MIMS
- A comprehensive handbook on pharmacology
- Compendium of laws and regulations
- Daily Drug Use (Talmud)
- BP and BPC
- Merck Manual or equivalent
- Standard Treatment Guidelines and the Essential Medicines Lists from the Department of Health
- Good Pharmacy Practice (GPP)
- Pharmaciae
- South African Pharmacy Journal.

The examination will be based on existing assessment criteria included in the competency standards for entry-level pharmacists.

The tables below indicate the type of question, weight and spread of marks per section for papers 1 and 2 related to competency standards.

(c) **Tips for preparing for the pre-registration examination**
Below are suggested approaches for preparing for and writing the pre-registration examination:

- **Become thoroughly familiar with the competency standards (CS) and the outcomes required of an entry-level pharmacist.** Decide how you will learn about each aspect of the competency standards and what learning resources you have or need to obtain. Discuss with your tutor anything you are not sure about, including aspects of the unit standards.

- **Decide on the reference texts that you will take into the examination.** Decide on a few references you are familiar with and take only those into the examination room instead of a suitcase of books you are unfamiliar with. A good rule of thumb is to take only as many books as you can carry comfortably.

- **Familiarise yourself with the content of your selected reference books.** Examine your selected references closely. Make sure you are aware of all the various types of information in the book(s). Very often there are useful tables, etc. that you are unaware of if you haven’t inspected all the different sections of the book.

- **Be familiar with the contents of your pre-registration intern manual.** Work through the manual and ensure that you have gained experience in all of the activities relating to the scope of practice of a pharmacist included in the manual.

- **Read the Pharmaciae published by Council.** Many current topics of relevance to the practice of pharmacy are discussed in the Pharmaciae.

- **Read the South African Pharmaceutical Journal (SAPJ) published by the Pharmaceutical Society of South Africa.** This will create an awareness of current trends, thoughts, controversies or practices in the profession.

- **Think about what you do in practice each day.** The entire period of your internship should serve as a preparation for your pre-registration evaluation.

- **Think about the tasks you perform every day in the particular sphere of pharmacy in which you practise.** Is the way in which you practise pharmacy ethical and legal? Are you aware of the legislation governing your actions? Are your recommendations/actions best practice – if so, why? If not, why not?

- **Practise solving problems and answering queries.** As problems and queries arise every day in the pharmacy where you work, practise finding solutions on your own. Always check with your tutor or another pharmacist if you are unsure.

- **Reflect on the contents of your CPD entries.** Your CPD entries should be well-developed by the time you write the pre-registration examination. Read through your CPD entries and reflect on the various items.

- **Attempt past papers for practice.** Obtain copies of some pre-registration examination papers from the Council. Previous papers are also available on the Council website [www.sapc.za.org](http://www.sapc.za.org). Attempt these papers under strict examination conditions. This will allow you to assess whether you are using the correct technique and to fine tune your strategy for the examination.

- **Calculations.** Do not memorise formulae or aids such as ‘donkey triangles’. Rather understand the rationale behind the calculation and work from first principles. Practise doing calculations in
the pharmacy in order to develop your skill in performing calculations which are required regularly. Please not that no formulae will be provided/included in the examination paper.

(d) Tips for writing the pre-registration examination:

- **Knowledge is in your head – references are for confirmation.** During an open book examination you do not have sufficient time to look up every aspect. If you try to do so you will not have time to fully complete the examination. This is especially true if you search for the same small piece of information in more than one reference book. You must be able to understand and answer the question without using reference books for every single question. Only use the reference books if you are unsure of the answer to a question, or if you need confirmation and fine detail.

- **Allocate the available time proportionally to the various sections.** This might seem to be a very basic concept but it is an area where candidates often fall short. Prior to the examination, calculate the time allowed per mark. Once you receive the paper quickly calculate how much time should be allocated to each section. Adhere to this guideline. If you have not completed a section within your allocated time allowance move on to the next section. You can come back to a section with which you are having difficulties. Rather complete those sections where you are confident of the answers and then spend time on sections where you will have to search for information.

- **Read the questions carefully.** Read the entire question slowly and ensure that you understand the question fully before you select your answer. Candidates often see a phrase in a question, decide that they know ‘all about that’ and select an answer accordingly, whereas if they had spent time reading the entire question they would have realised their answers were irrelevant.

- **Calculations – is your answer realistic?** On completion of a calculation look critically at your answer: Is it realistic?

If you apply these suggestions/recommendations you should succeed in the pre-registration evaluation.

Finally – have a good night’s sleep before the examination and try to relax and enjoy the experience. Your performance will improve if your stress levels are low.

(e) Results

The following principles apply with regard to examination results:

- Once the examination has been conducted, the answers are marked electronically by the system and the results get moderated.
- The results of candidates will be expressed as whether the candidate has passed or failed the examination.
- Results are approved by Council’s Education Committee, or any other committee or person to whom Council delegates the function.
- Results are released to candidates only after approval.

3.2 CONTINUING PROFESSIONAL DEVELOPMENT (CPD) FOR INTERNS

Council resolved to introduce continuing professional development (CPD) for pharmacists and other persons registered with the Council. Registered persons are required to submit a record of their CPD activities in
accordance with the CPD cycle. A web-based system is used for the submission of details of CPD activities. Each registered person will be required to keep a portfolio of evidence.

Continuing professional development has been defined in the Regulations relating to pharmacy education and training published in terms of the Pharmacy Act, 53 of 1974 as follows – Continuing professional development means the process by which natural persons registered with Council continuously enhance their competency throughout their professional careers, and encompasses a range of activities including continuing education and supplementary training.

(a) How to enter CPD entries online

To enter a CPD entry, visit the website www.sapc.za.org and log into the secure members only site with your P number, ID number and password. To access a password, follow the links provided to receive the password via SMS. Once in the secure site, select CPD in the tabs at the top of the page. Once selected, select ‘enter CPD activity’ on the right hand side of the page.

REMEMBER: BEFORE THE FIRST CPD ENTRY CAN BE SUBMITTED, THE ANNUAL DECLARATION MUST FIRST BE COMPLETED.

The CPD cycle is a process that involves four steps:

- **Step 1:** Reflection on practice (Answers the questions - What do I need to know? What do I need to be able to do?)
- **Step 2:** Planning (Answers the question – How can I learn?)
- **Step 3:** Implementation (Describes the action taken)
- **Step 4:** Evaluation or reflection on learning (Answers the questions – What have I learnt? and How is it benefiting my practice?).

Figure 1: The CPD cycle outlining the four steps in the CPD process
The CPD cycle assists the registered person to maintain, update and develop their competencies by:

- Identifying individual learning needs
- Recognising the learning that may occur in the workplace
- Acknowledging that people learn in a variety of ways
- Planning and prioritising on how to address the learning activities
- Choosing a preferred learning style to gain knowledge
- Evaluating the outcome of the learning activity
- Applying knowledge to the person’s personal practice situation.

Interns are required to complete all four steps of the CPD cycle for each online CPD entry. Information must be provided on each step in the CPD cycle undertaken.

(b) Interns’ CPD requirements

Below are CPD requirements for Pharmacist interns

- Interns must submit eight CPD entries (eight different competency standards), all steps of the CPD cycle (figure 1) must be completed.
- Interns must be competent in six of the eight entries submitted. All eight entries have to be assessed for the intern to be declared competent.
- Interns must select one outcome from each competency standards numbered 1 to 7 [thus seven entries] and one outcome from either competency standards 8, 9 or 10 [thus the eighth entry]. Each entry is based on a single outcome. Competency standard 1 to 7 are compulsory.
- Entries, together with suitable evidence, must be submitted online.
- Interns must adhere to the submission timelines.

In Annexure A, all 10 competency standards (CS) required for an entry-level pharmacist are indicated. Each CS has one or more outcomes e.g. 3.1, 3.2, 3.2, etc.

Interns are required to submit one entry per month. Interns are advised to record CPD entries but not submit until such time that they have attended the intern/tutor workshop.

The deadlines for submission of CPD entries are indicated in Table 6. Results will be released every two months. Interns must plan accordingly and must adhere to submission deadlines as CPDs submitted after the deadlines will be only assessed and released in the subsequent period.

Table 6: CPD submission deadlines for 2017.

<table>
<thead>
<tr>
<th>LAST DATES FOR SUBMISSION OF CPD ENTRIES</th>
<th>NOTE THAT</th>
</tr>
</thead>
<tbody>
<tr>
<td>27 February 2017</td>
<td>According to Council Policy, appeals must be submitted within one calendar month after the release of the results.</td>
</tr>
<tr>
<td>18 April 2017</td>
<td>THERE WILL BE NO CPD ASSESSMENTS IN DECEMBER. ENTRIES SUBMITTED AFTER 19 SEPTEMBER 2017 WILL ONLY BE ASSESSED AT THE END OF JANUARY 2018.</td>
</tr>
<tr>
<td>13 June 2017</td>
<td></td>
</tr>
<tr>
<td>02 August 2017</td>
<td></td>
</tr>
<tr>
<td>19 September 2017</td>
<td></td>
</tr>
<tr>
<td>12 January 2018</td>
<td></td>
</tr>
</tbody>
</table>

Please note that on submission of the 13th CPD a fee, determined by Council, will be charged. The fee is published on the Council website.
The Competency Standards are outlined in annexure A.

(c) How will an assessment be conducted?

To be deemed competent for the CPD component of the pre-registration evaluation, the intern is required to submit 8 CPD entries, and be successful in six of the eight CPD entries. Competency standards 1-7 are compulsory.

In order to determine successful completion of an entry, interns should ask themselves the following questions (not limited) when compiling their CPD entries:

- What did I do?
- What was I trying to achieve?
- What went well and why?
- What did not go well and why?
- How did I do it?
- Why did I do what I did?
- Why did I do it this way?
- How did it affect me?
- How did it affect others?
- What were the consequences?
- What could I have done differently and how?
- Could I learn something from this?

The answers to the above would assist the intern to focus on the purpose of the CPD entry.

The entry must be personal and be written in the first person using the pronoun “I”. The entry must set the scene and tell a story.

Under implementation (step 3), the evidence must contain a link to the competency standard outcome with a reference to each subsection of the outcome. A link must also be shown between the evidence provided and the demonstration of competency. A reference to each piece of evidence must be provided.

An intern must also show how they will maintain this competency in the future. Learning needs and/or the need for further exposure to an aspect of practice should be discussed.

(d) Matters to be considered during assessment

Competency Standard 1

evidence relating to manufacturing, compounding or packing may be provided in terms of GMP in the bulk packing

Competency Standard 4

evidence relating to pharmacist initiated therapy should NOT include a prescription as it is not a pharmacist initiated therapy

Competency Standard 6

the emphasis must be on the promotion of community health and the provision of information and advice to communities and NOT to individuals

Competency Standards 8 to 10

One outcome from Competency Standards 8, 9 or 10 must be submitted.
Table 7: Criteria for assessment of a CPD entry.

Weight: 0 = not yet met the requirement; 1 = requirement partially met; 3 = requirement fully met.
NOTE that where the total weight is 1, then 0 = not yet met the requirement and 1 = requirement fully met.

<td></td>
</tr>
</tbody>
</table>

Overall Comments: Assessors should be able to make a final decision that the intern has met or not yet met the requirement.

GRAND TOTAL | 18 | 18 | 18 |
General - Matters to be noted

To earn three marks for description in each step of the cycle (reflection, planning, implementation and evaluation), all criteria indicated per step of the cycle must be met and the appropriate professional communication styles must be used, for example:

- no spelling or grammatical errors
- entries properly punctuated
- trade names capitalised.

Assessment criteria: Evidence

Valid Evidence

Evidence must be valid, current, authentic and sufficient. It is the responsibility of the assessor to ensure that sufficient and appropriate evidence has been collected to make an accurate judgement about an intern’s competency.

The following guidelines should be used in determining whether evidence is considered valid:

- Evidence must pertain to the outcome being addressed.
- If there are factual errors or calculation errors in the evidence submitted, the evidence should be deemed not valid.
- Further allocation of marks for evidence is summarised below.

<table>
<thead>
<tr>
<th>0</th>
<th>3</th>
</tr>
</thead>
<tbody>
<tr>
<td>No evidence</td>
<td>Valid</td>
</tr>
<tr>
<td>Confidentiality breached</td>
<td>Current</td>
</tr>
<tr>
<td>No authentication</td>
<td>Authentic</td>
</tr>
<tr>
<td></td>
<td>Sufficient</td>
</tr>
</tbody>
</table>

Current Evidence

Pharmacist interns are required to have exposure to all the unit standards for entry-level pharmacists during the internship period. Only evidence collected during the internship period is regarded as current evidence. Activities undertaken during the intern’s undergraduate studies are not deemed to be current.

Authentic Evidence

In order to be deemed authentic, evidence for each outcome must have the following:

- The initials, surname, P number and signature of the pharmacist intern
- The signature of a person who verified that the evidence is authentic, e.g. tutor and responsible pharmacist, pharmacy manager or patient. All signatures must be accompanied by a date, a printed name, P number and the designation of the bearer of the signature.

Note: Council is in the process of improving the CPD system to allow tutors of interns to access their intern’s CPD entries to verify them before submission for assessment. Council will inform tutors once this functions is ready for implementation.
If there is a large amount of evidence that supports one subsection of an outcome, the pieces of evidence relevant to that subsection may be combined into one group for one signature. In these instances, it is not necessary for each and every piece of evidence to be signed and stamped individually.

In the case of work which has been done jointly (e.g. research), interns must submit individual reports and include a declaration describing the role they played.

**Sufficient Evidence**

In order to be regarded as sufficient, the intern must provide clear evidence for all the subsections of an outcome where the outcome has four or less subsections. In the case of an outcome that contains four or more subsections the pharmacist intern must submit evidence that covers at least 75% of the subsections of an outcome. For example, in the case of Competency Standard 1, an intern would have to submit evidence for all subsections of outcome 1.4 which has four subsections (1.4(a) to (d)). But for outcome 1.7 which has six subsections (1.7(a) to (f)) they would only have to submit evidence for at least four subsections of the outcome.

The same piece of evidence cannot be used for more than one outcome (i.e. for every outcome there should be a piece of evidence)

Please note that images, Acts, the GPP, etc., are NOT regarded as sufficient evidence. Please do not upload the entire Act if your CPD entry only focuses on one aspect of the Act.

**Releasing results**

The following principles are applied in releasing results for CPD entries:

- The results of candidates will be expressed as whether the candidate is ‘competent’ or ‘not yet competent’.
- Results are approved by Council’s Education Committee or any other committee or person to whom Council delegates this function.
- Results are released to candidates only after an entry has been approved.

**Main reasons why interns fail their CPD entries**

- It is not clear to the assessor WHAT it is that the intern did.
- Competency Standard 4 is based on pharmacist initiated therapy – if a prescription forms part of the evidence, it is not regarded as pharmacist initiated anymore and the intern will be penalised and fail.
- The evidence that the intern submitted was not authenticated – the intern and tutor did not sign (initials, surnames, P numbers, signatures and designations) ALL the pages/groups of evidence and the outcomes.
- The intern did not provide sufficient evidence for all the subsections (a, b, c, etc.) of the outcome (as per annexure A).
- If an intern waits until the last submission date of the year and submits all eight entries at once, there may be a simple/common mistake in all eight entries, like an absent signature, that could result in the intern failing all eight entries. The intern will have to wait until February of the following
year to be re-evaluated. In this scenario, neither Council nor the assessor will be held responsible if the internship year is extended.

- An intern did not refer to this user manual and the CPD guidelines on the website www.sapc.za.org before completing the CPD entry.
- The intern’s CPD entry did not relate to exposure to competency standards DURING the internship period.
- The evidence was not collected DURING the internship year.
- The intern included evidence obtained during their undergraduate years.

Reanalysis (reassessment) of CPD entries/results and appeal process for CPD entries submitted by pharmacist interns

Candidates may lodge appeals against evaluations conducted by Council in terms of Council’s Appeal Policy.

Any candidate may request a reanalysis (reassessment) of their CPD entry in the manner described below:

- The candidate must lodge a request within one calendar month of the date of the notification of the results.
- The request must be in writing and must be submitted to the Registrar together with a non-refundable fee as determined by Council.
- The Registrar will forward the request for a re-mark to the moderator that was appointed for the examination.
- Once the result of the re-mark has been received by Council and approved by the Registrar, it shall be communicated to the candidate within 14 days of receipt of the result.
- Should the candidate not be satisfied with the reassessed/reanalysis, they may initiate the appeals process in terms of Council’s Appeal Policy.

Irregularities

The CPD entry submitted must reflect the work done personally by the intern. The submission will be subject to plagiarism software.

In the event of evidence of a candidate’s dishonesty, or other irregularities in the conduct of a candidate, the results of the candidate will be withheld and the matter referred to the Registrar of Council for appropriate action to be taken. The appropriate action initiated by the Registrar may include referral to the Committee for Preliminary Investigation.

Courses and providers of continuing professional development

Information on continuing education courses/lectures/seminars can be obtained from professional pharmacy societies and accredited providers. The Pharmaciae and Council’s website also publish information on various courses. It is strongly recommended that tutors select the courses for interns, and allow them time off to attend. It would be ideal if the tutor and the intern could attend the courses together, especially those that are directly relevant to the internship programme.
The tutor could furnish the intern with additional information on the course subject prior to the commencement of the course. For example, a programme for the weeks preceding a continuing education course on asthma could contain some of the following:

- **dispensing procedures and practice**
  - review the specific routines or precautions followed during the dispensing of asthma preparations, refills, etc.

- **clinical aspects**
  - allergic asthmatic conditions
  - asthma in children
  - control of asthma

  (The intern would be expected to review the drugs involved, indications for use, dosage, side-effects, contraindications and patient counselling on general lifestyles.)

- **treatment of condition**
  - asthma preparations available for use at the discretion of the pharmacist

- **communication with patients, health professionals and the public**
  - counselling where needed
  - recommendations for the prevention and control of asthma attacks

- **application of the legislation**
  - scheduling of asthma preparations
  - labelling requirements

- **good pharmacy practice and good manufacturing practice**
  - discuss the importance of expiry dates of asthma preparations, aspects in the manufacturing of asthma preparations and pharmacoeconomic aspects of the various products

- **drug information**
  - assist the intern in accumulating information on the condition and correct usage of preparations and how to communicate information to a patient.
3.3 PROGRESS REPORTS

The following diagrams reflect the time periods for the submission of assessment reports on the progress of the intern during the internship.

COMMUNITY AND HOSPITAL, AND MANUFACTURING PHARMACIST INTERNs

1st Report – 12 Weeks
- 1st Personal and Professional Development report
- 2nd Sectoral Experience Checklist
- Summary of outcomes achieved

2nd Report – 24 Weeks
- 2nd Personal and Professional Development report
- 1st Sectoral Experience Checklist

3rd Report – 36 Weeks
- 3rd Personal and Professional Development report

4th Report – 45 Weeks
- 4th Personal and Professional Development report
- 2nd Sectoral Experience Checklist
- Summary of outcomes achieved

ACADEMIC AND MANUFACTURING PHARMACIST INTERNs

At the completion of the period of 400 hours of practical training in a community or institutional (hospital) pharmacy (to be completed by pharmacist supervising training)
- Personal and Professional Development report
- Sectoral Experience Checklist

At the completion of the internship (to be completed by the tutor in the academic institution)
- Summary of outcomes achieved
Please note: Tutors must complete and submit progress reports for interns online. Progress reports can be accessed on the website under the Education tab.

(a) Assessment of the interns by the tutor.

The assessment of interns takes place on a systematic and regular basis and should involve positive reinforcement on appropriate performance and constructive criticism on performance that could improve. The intern should receive accurate feedback on their performance as reflected in daily and less regular assessments. Where appropriate, the intern must provide evidence that they have achieved the required standard.

The assessment of the performance of the community and hospital pharmacist intern takes place on the following occasions and in the following manner:

- on a day-to-day basis by the tutor in the execution of daily duties and activities and which is not necessarily recorded
- the professional development of the pharmacist intern is assessed at 12, 24, 36 and 45 weeks of the programme
- a sectoral experience checklist completed at 24 and 45 weeks of the programme to assess the level of competency of the intern within the sector
- an assessment of the outcomes achieved by the intern at 45 weeks of the programme.

The assessment of the performance of the academic intern and the intern in a manufacturing pharmacy takes place on the following occasions and in the following manner:

- on a day-to-day basis by the tutor at the academic institution in the execution of daily duties and activities and which is not necessarily recorded
- the supervising pharmacist assesses the professional development of the pharmacist intern at the completion of the period of not less than 400 hours of practical training at a community or institutional (hospital) pharmacy
- the supervising pharmacists completes a sectoral experience checklist at the completion of the period of not less than 400 hours of practical training at a community or institutional (hospital) pharmacy to assess the level of competency of the intern within the sector
- the tutor at an academic institution and manufacturing pharmacy provides an assessment of the outcomes of the internship completed at the end of the internship period.

(b) Guidelines for tutor assessments (applicable to progress reports)

Background

The purpose of this section is to provide the tutor and the intern with guidelines that may be used in the assessment of the competency of a pharmacist intern. The assessment of competency is concerned with establishing whether the intern is able to meet the specified standards of
performance required of an entry-level pharmacist in a consistent manner, and demonstrates evidence of knowledge, skills and attitudes at the required levels of competency.

In simple terms, an assessment is the process of gathering and judging evidence to determine the current level of performance against a given set of competency standards. It assesses what a person can actually do, not only what they know, and is measured against the requirements of the practice situation, not against a curriculum. Judgements are made on ability-based outcomes, including thinking and communication, ethical values and principles, and self-learning abilities and habits.

Assessment decisions are simply a matter of judgement as to whether or not evidence presented is sufficient to show that standards of performance have been met, and can continue to be met in the practice situation.

**The process of assessment**

An assessment of performance during the course of a pharmacist intern’s normal work provides the most natural form of evidence. Because of this, it is generally the best method of assessing competency. Where such an assessment is not possible, simulated activities can be used as an alternative or supporting method of assessment. These activities could take the form of role plays or demonstrations carried out separately or in support of the assessment.

It is important to bear in mind that in the assessment process there are no pass or fail marks. The pharmacist intern needs only to demonstrate to the satisfaction of the tutor, that they are either competent or not yet competent. Assessments are carried out against criteria detailed in the manual for pharmacist interns, and are not linked to a particular learning curriculum.

In the assessment of the intern, the tutor can make use of the following guidelines to determine how an intern is proceeding with a particular task:

- test **knowledge** (do they know what they are doing)
- test **competency** (are they able to perform the tasks and how well)
- test **efficiency** (can they be relied upon to perform a task accurately and safely within a reasonable time)
- determine if skills, knowledge and values can be used and **transferred** to different circumstances
- assess the performance within the **context of the competencies** required of a pharmacist at entry level.

An integrated approach to assessment aimed at assessing knowledge, understanding, problem solving, technical skills, attitudes and ethics should be used. Assessment processes should be aimed at enabling the tutor to evaluate the performance of the pharmacist intern in a number of areas:

- **technical** – knowledge of pharmacy, problem solving, the application of theoretical concepts to practical problems
- **organisational** – ability to plan, attention to detail, ability to meet deadlines
- **communication** – clarity of written communications, ability to work within a team, effectiveness of oral communications
- **attitudes** – initiative, willingness to accept responsibility, ability to follow instructions.
Assessment activities should be:

- **flexible** in providing for the special needs of both the pharmacist intern and the environment
- **valid** in that they assess only the outcomes required
- **reliable** insofar that the assessment reflects the pharmacist intern’s outcomes, regardless of how and where the assessment is carried out
- **transparent** in that all of the processes used, and their outcomes, are clear to both those assessing and those being assessed.

The methods used to assess evidence should allow for judgements to be made on the performance of the pharmacist intern against the criteria specified in the assessment forms in this pre-registration manual. The assessments should also assist in the provision of feedback to the intern. Furthermore, assessments will identify areas that require further experience or training before the pharmacist intern can be deemed to be competent.

Objective assessment against clear assessment criteria, followed by accurate and honest feedback, is a vital tool in learning gained by means of the assessment process.

**Methods of assessment**

Competency is focused on the performance of a role or set of tasks. The tasks are integrated and the ability to demonstrate the tasks as an outcome of a required competency would indicate the effective performance levels of the person. Performance in a competency-based approach may be assessed by four major forms of assessment:

- direct observation
- tests of practical or technical skills
- simulations
- questioning.

The evidence of the competency of a person is demonstrated by the possession of a relevant set of attributes such as knowledge, skills and attitudes making up a particular competency.

The amount of **knowledge** needed is that amount necessary for a person to perform a task competently. It includes the ability to make rational decisions and judgements about the task. The knowledge to be assessed should be the core or essential knowledge that has been derived from a task analysis and is necessary to perform the task competently.

Methods of assessing knowledge:

- case studies
- reports
- evidence of prior learning
- oral questioning
- simulations.

**Attitudes** determine how a person applies the knowledge and performs the tasks required of a particular competency. Attitudes which are important in a particular situation will depend on the circumstances of that particular situation and the following list, although not complete, is an indication
of the types of attitudes that may be required of a person involved in the provision of pharmaceutical care and services:
• a desire for lifelong learning
• respect for the convenience, comfort and beliefs of patients
• a desire to share knowledge and skills
• an eagerness to overcome difficulties
• a willingness to share in the whole range of community activities
• a desire to be of service to the community and individuals within the community
• a desire to cooperate with other members of the healthcare team within the community.

Methods of assessing attitudes:
• direct observation of work activities
• evidence from prior achievements
• oral questioning
• self-evaluations and reports
• simulations.

The ability to apply knowledge in the work environment is an indication of the acquired skills that a person may possess. The purpose of assessing skills is thus to determine whether a person is capable of using the knowledge to actually perform a particular task rather than describing what should be done.

Skills are only effectively assessed by observing the performance of a person and making a judgement based on standardised observation criteria. Skills are not limited to the ability to manually perform a task, but include the ability to integrate both knowledge and attitudes of a variety of tasks that may form part of a whole competency.

Methods of assessing skills:
• direct observation of work activities
• skills or work sample tests
• projects or assignments
• log books
• records of achievements or portfolios.

Knowledge and understanding can also be conceived as inherent in performance, and any observation of performance is likely to provide evidence of knowledge and understanding as well as skills. Performance assessment can thus be seen as an integrated activity. Assessments can be carried out by using one or a mix of the methods described above. Tutors should try wherever possible not to limit themselves to any single method or methods when alternatives might be equally effective. Methods used to assess the competency of an intern may include:
• direct observation of work activities in the pharmacy
• evaluation of the case studies completed by the pharmacist intern
• evaluation of the record of daily events maintained by the intern during the pre-registration period.
Suggestions on the assessment and feedback process

The following suggestions are provided to assist in the feedback process following an assessment:

• where possible, provide positive feedback and make positive suggestions
• identify areas for improvement, for instance pharmaceutical knowledge
• allow for regular time to discuss the training/progress or assessments of the intern
• ask for the opinion of the intern on their performance
• avoid being too generous and try to establish an honest, fair and realistic level
• avoid letting one dominant positive/negative aspect overshadow the other less dominant characteristics.
4. Forms required during internship

The following forms, which may be required during the pre-registration year, are available on the website (www.sapc.za.org):

- Application for cession of contract of internship in terms of the Pharmacy Act, 53 of 1974
- Declaration of completion of 400 hours of practical training by academic interns or interns in manufacturing pharmacy in terms of the Pharmacy Act, 53 of 1974 (to be completed online)
- Progress reports which must be completed by the tutor online
- Application for registration as a pharmacist with a qualification in pharmacy obtained within the Republic in terms of the Pharmacy Act, 53 of 1974, as amended.

Please note that the relevant information, including application forms and details of the allocation process relating to the performance of pharmaceutical community service, will be forwarded to you by the Department of Health (DoH).

For more information about community service, please access the contact details from the website www.doh.gov.za.

Note: If the employer has agreed to pay for any applicant’s registration, it still remains the responsibility of the applicant to ensure that payment is made on time. If not, the registration date or the pre-registration period will be affected.

The applicant must ensure that their courier address is up to date as the certificate for registration as a pharmacist on completion of pharmaceutical community service is sent to the courier address.
5. South African Pharmacy Council

The South African Pharmacy Council is an independent statutory body created as a result of the recognition of the pharmacy profession by the legislature in South Africa as a particular occupational group. The Council has been vested with statutory powers of peer review and is responsible for funding itself.

<table>

Vision of South African Pharmacy Council

“Sustainable quality pharmaceutical services for all”

Council’s Mission Statement

The mission statement of SAPC is:

We exist to:

• protect the public by improving health outcomes

• assist in promoting access to sustainable quality pharmacy services by embracing the use of innovation and technology
• ensure quality pharmaceutical services by developing, enhancing and upholding universally acceptable education and practice standards through stakeholder engagement

• promote the dignity of the profession through professional ethics and conduct, and ongoing competency

Council's Core Values

The core values of SAPC, illustrated by the acronym P.A.P.I are:

People first - we care, we serve, we collaborate, we belong to the community
Accountability - we are responsible and answerable for our actions
Professionalism - we will develop our staff to perform their work with expertise, dedication, care and act in a competent and excellent manner at all times
Integrity - we will be ethical, transparent and honest in conducting our business

Functioning of Council

The functioning of the Council can be described by giving a brief analysis of the different committees and the structure of the administration of Council. The Council meets at least three times per annum.

COUNCIL COMMITTEES

Executive Committee

The Executive Committee deals with matters which, in the opinion of the President, require urgent attention and any act performed or decision taken by the Executive Committee is of force and effect unless it is set aside or amended by the Council at its next meeting.

The Executive Committee deals with matters relating to conditions of employment, finance and any other matter which falls outside the terms of reference of other committees. The Executive Committee also deals with any matter which requires urgent attention.

Education Committee

The Education Committee considers all matters relating to the establishment, development, maintenance and control of universally acceptable standards in pharmaceutical education and training, including the approval of providers of education and training, examinations, the evaluation of educational qualifications and exemptions from examinations. It may also deal with other matters delegated to it by the Council from time to time.

Practice Committee

The Practice Committee considers all matters relating to the establishment, development, maintenance and control of universally acceptable standards of the practice of the various categories of persons required to be registered in terms of the Act, as well as the promotion of pharmaceutical care which complies with universal norms and values, both in the public and the private sector, the registration of pharmacies, as well as the issuing of permits in terms of the Act or medicine related legislation. It may also deal with other matters delegated to it by the Council from time to time.
Committee of Preliminary Investigation

The Committee of Preliminary Investigation conducts investigations in terms of Chapter II of the Regulations relating to the Conduct of Inquiries held in terms of Chapter V of the Act.

Committee of Informal Inquiry

The Committee of Informal Inquiry conducts informal inquiries in terms of Chapter III of the Regulations Relating to the Conduct of Inquiries held in terms of Chapter V of the Act.

Committee of Formal Inquiry

The Committee of Formal Inquiry conducts formal inquiries in terms of Chapter IV of the Regulations Relating to the Conduct of Inquiries held in terms of Chapter V of the Act.

Health Committee

The Health Committee, appointed by Council in terms of the Regulations relating to the management of a person unfit to practise for reasons other than unprofessional conduct, considers allegations or information received by the Registrar that a person registered in terms of the Act may be unfit to practise.

CPD Committee

The CPD Committee is appointed by Council in terms of section 4 (0) of the Act. In the Code of Conduct: A pharmacist must keep abreast of professional knowledge in order to maintain a high standard of competency relative to his/her sphere of activity.
A list of pharmaceutical and other organisations has been compiled to assist the intern in becoming acquainted with the various professional bodies and heads of pharmaceutical services in various provinces that interact with the pharmacy profession.

The information has been compiled by the various organisations. Please note that this is not a complete list of pharmaceutical organisations in South Africa.

The intern is encouraged to contact these organisations for further information regarding membership or services offered.

Mission of the Department of Health

The mission of the Department of Health is to provide leadership and guidance to the health sector in its efforts to promote and monitor the health of all South Africans, and to provide caring and effective services through a primary healthcare approach.

Aims

The development of the National Health System (NHS) is one of the priorities of the Department of Health and has the following aims:

- unify the fragmented health services into a comprehensive and integrated system
- reduce disparities and inequities in health service delivery and health outcomes
- extend access to an improved health service.

The NHS will contribute to the reduction of morbidity and mortality, and the improvement of the general wellbeing of all South Africans, particularly women and children.

Structures

To provide equitable, accessible and appropriate health services requires a proper organisational and institutional framework, and thus part of the restructuring of the health system involved the division of health functions between the national and provincial departments of health.

The Department of Health includes, inter alia, the Directorates of Medicines Administration and Pharmaceutical Services, which are responsible for the pharmaceutical services provided for by the state hospitals and clinics. This responsibility is delegated further to the provincial pharmaceutical services in each of the nine provinces and they are responsible for the provision of pharmaceutical services within their own provinces.

The guiding principles for the reconstruction and development of the health sector are to:

- unify fragmented health services at all levels into a comprehensive and integrated NHS
- promote equity, accessibility and utilisation of health services
extend the availability and ensure the appropriateness of health services
• develop health promotion activities
• develop the human resources available to the health sector
• foster community participation across the health sector
• improve planning in the health sector and the monitoring of health status and health services.

The National Drug Policy

As part of the national health policy, the Department of Health has committed itself to a National Drug Policy (NDP), which was released by the Minister of Health in February 1996.

Some important issues addressed by the NDP are summarised below.

The pharmaceutical sector, as an integral part of the health sector, will be able to ensure equitable access to medicines that are appropriately selected and meet real health needs through the implementation of the National Drug Policy.

The cornerstone of the process is the selection of essential drugs and rationalising the use and expenditure of drugs from a published Essential Drug List (EDL).

Drug costs are relatively high in South Africa due to the pricing structure that presently applies. A pricing committee was appointed to develop a new pricing policy that will ensure affordability to both the state and the private medicine user.

Several pricing measures and cost-saving mechanisms have been considered, which include removing the profit motive on medicines at the level of distributor and health providers and introducing in its place a system of distribution and professional fees.

Objectives

1. Health objectives
   • to ensure the availability and accessibility of essential drugs to all citizens
   • to ensure the safety, efficacy and quality of drugs
   • to ensure good dispensing and prescribing practices
   • to promote the rational use of drugs by prescribers, dispensers and patients through the provision of the necessary training, education and information
   • to promote the concept of individual responsibility for health, preventative care and informed decision-making.

2. Economic objectives
   • to lower the cost of drugs to both the public and private sectors
   • to promote the cost-effective and rational use of drugs
   • to establish a complementary partnership between government bodies and private providers in the pharmaceutical sector
   • to optimise the use of scarce resources through cooperation with international and regional agencies.
3. **National development objectives**

- to improve the knowledge, efficiency and management skills of pharmaceutical personnel
- to re-orientate medical, paramedical and pharmaceutical education towards the principles underlying the National Drug Policy
- to support the development of the local pharmaceutical industry and the local production of essential drugs
- to promote the acquisition, documentation and sharing of knowledge and experience through the establishment of advisory groups in rational drug use, pharmacoeconomics and other areas of the pharmaceutical sector.

**The role of the pharmacist**

The NDP clearly spells out the role of the pharmacist. The pharmacist has a special role in the National Health Policy and the National Drug Policy, especially in quality assurance and the safe and effective administration of drugs. Pharmacists will be in a strong position to promote the rational use of drugs through their extensive knowledge.

- Community pharmacists have a central community educational role in patient instruction and in the correct use of drugs.
- Pharmacists will be involved in a multi-disciplinary approach to the rational use of drugs, and greater cooperation within the health team will facilitate consensus regarding the choice of drugs and protocols.
- Pharmacists will also play a critical role in primary healthcare and preventative health services.
- Pharmacies will be required to have available scientific sources of reference, and require access to additional essential information from a central drug information system.
- The policy will also aim at expanding and standardising the training of pharmacist’s assistants. Pharmacists will be prepared for certain tasks in hospital pharmacies under the supervision of pharmacists, and for managing drug supply in primary care clinics under the indirect supervision of a district pharmacist.

The NDP developed for South Africa covers a wide range of activities that contribute to the effective production, supply, storage, distribution and use of medicines, ensuring that the people of South Africa receive the drugs that they need at a cost that they, and the system as a whole, can afford.
### 8. Heads of Pharmaceutical Services

COMPETENCY STANDARDS FOR CPD

INTRODUCTION

Pharmacists in each field of practice need to accept responsibility for the self-assessment and maintenance of their competency throughout their professional lives. Pharmacists are thus encouraged to identify their own learning needs in the context of their practice setting. They should plan how these needs will be met and then assess the impact of what has been achieved on their day-to-day practice.

Continuing professional development of a pharmacist is thus a cyclical process. The first step is to review and reflect on one’s practice as a pharmacist. This review should include an assessment of one’s knowledge, skills and attitudes. The second step is to plan what learning activities you can undertake or other steps that you need to take in order to address the gaps in knowledge and skills identified. In this process, areas in your practice as a pharmacist, which could be improved, can also be identified and addressed. Learning activities which could be undertaken include both informal and formal activities such as distance education, work shadowing, study groups, coaching, attendance of formal lectures, conferences and workgroups, special projects and assignments, computer aided learning and the reading of articles/journals. The third step is to undertake in your practice environment, the actions that you have identified as being important in the learning process. Learning activities undertaken and changes made to your practice must be documented in your portfolio. The fourth step is to reflect on and assess the impact that has been made by these efforts both on your development as a person and as a pharmacist, as well as the impact, which has been made on your practice of the profession.

Competency standards have been developed, as a tool to help you to assess your own learning needs. Gaps in your knowledge and skills can be identified by comparing your own knowledge and skills with those required by the standards. Competency standards have also been structured in such a way that it will help you to identify areas within your practice setting, which could be modified and/or improved. Competency standards are based on the seven unit standards for entry-level pharmacists, which have been accepted by the South African Pharmacy Council as the minimum competencies required for entry into the profession. Three additional sections have been added. These deal with facilitating the development of pharmaceutical personnel, practising pharmacy professionally and ethically and the management of a pharmacy/pharmaceutical service. Because of the fact that pharmacists practise in such a variety of practice settings, provision has been made for you to check in the introduction each standard, whether or not the standard applies to you. This provision should be used in instances where the aspect of practice identified does not relate to your particular practice setting.

For example, if you are practising as a pharmacist in a community pharmacy, the section of the questionnaire relating to manufacturing, compounding and packaging need not be completed if you do not perform these functions in your day-to-day practice.

Please take the time to use this tool.
1. **COMPETENCY STANDARD ONE: ORGANISE AND CONTROL THE MANUFACTURING, COMPOUNDING AND PACKAGING OF PHARMACEUTICAL PRODUCTS**

**Does this standard apply to me?**

The standards apply to all pharmacists whose practice includes the manufacturing, compounding and packaging of pharmaceutical products.

**INTRODUCTION**

The pharmacist has a crucial role to play in the manufacturing, compounding and packaging of pharmaceutical products.

In terms of the manufacturing of medicines, the entry-level pharmacist must be competent in the relevant baseline functions within the manufacturing processes. He/she must also be competent in the compounding of medicine on a small scale, as well as the packaging of products.

The pharmacist should at least have a good theoretical knowledge of the manufacture of all dosage forms, including:

- the properties of ingredients used in the manufacturing process;
- manufacturing processes and apparatus;
- the properties of various dosage forms;
- the legal aspects relating to registration, clinical testing, storage and distribution of medicines and finished products;
- logistical aspects including acquisition, storage and distribution of material, ingredients and finished products;
- packaging of finished products, including stability characteristics and storage requirements;
- understanding the principles of good management with respect to the manufacturing, compounding, packing and distribution of medicines to ensure a continuing comprehensive, ethical and cost-effective pharmaceutical service to the public/community.

The pharmacist should be expected to have a solid theoretical base line knowledge in manufacturing processes, which may be expanded upon as an elective to further education and training for a specialisation in the manufacturing pharmacy sector.

The competency standard presented here reflects those competencies required for the manufacturing pharmacist as determined by consultation with the pharmaceutical manufacturing industry. There are aspects of the standard that also apply to the pharmacist working in community or hospital pharmacy.

The outcomes and assessment criteria are workplace-related and represent the minimum assessment criteria for evaluations of competency within the pharmaceutical manufacturing workplace.

**CAPABILITY AND OUTCOMES**

A person who has achieved this standard is capable of authorising and controlling personnel, materials and equipment in the manufacturing, compounding and packaging of pharmaceutical
products according to good manufacturing practice, and controlling the quality of these; leading the work team and assisting in the training of pharmacist’s assistants in-training.

The following outcomes of this capability should be demonstrated by the pharmacist:

1.1 Plan the production process (manufacturing).

<table>
<thead>
<tr>
<th>A person who has achieved this outcome is capable of</th>
</tr>
</thead>
<tbody>
<tr>
<td>(a) Scheduling the process in the work plan according to production requirements, area allocation, manpower, equipment and time.</td>
</tr>
<tr>
<td>(b) Assuring availability of resources (materials, componentry) in the correct quantities.</td>
</tr>
<tr>
<td>(c) Assuring documentation is available and correct.</td>
</tr>
</tbody>
</table>

Assessment (Tick appropriate box)

Does this outcome form part of my current practice of pharmacy?

Yes ☐ No ☐

IF YES, on the basis of the evidence I have identified I can do this.

1.2 Organise resources and prepare materials in accordance with process documentation (manufacturing).

<table>
<thead>
<tr>
<th>A person who has achieved this outcome is capable of</th>
</tr>
</thead>
<tbody>
<tr>
<td>(a) Assembling the production team according to the work schedule.</td>
</tr>
<tr>
<td>(b) Assembling the materials/componentry as per batch documentation.</td>
</tr>
<tr>
<td>(c) Assuring all materials/componentry have been released according to specifications.</td>
</tr>
<tr>
<td>(d) <strong>Controlling</strong> and check accurate weighing/measurement of raw materials according to documentation and <strong>standard operating procedures</strong>.</td>
</tr>
<tr>
<td>(e) Assuring that equipment/machinery is available as per the work schedule.</td>
</tr>
<tr>
<td>(f) <strong>Ensuring</strong> environmental control where applicable.</td>
</tr>
<tr>
<td>(g) <strong>Ensuring preparation of production/compounding processes according to product specifications, labelling and batching and legal requirements.</strong></td>
</tr>
</tbody>
</table>

Assessment (Tick appropriate box)

Does this outcome form part of my current practice of pharmacy?

Yes ☐ No ☐

IF YES, on the basis of the evidence I have identified I can do this.

1.3 Organise resources and prepare materials in accordance with process with process documentation (institutional, community, manufacturing).

| A person who has achieved this outcome is capable of |
(a) Assembling the materials/components.
(b) Controlling and check accurate weighing/measurement of raw materials according to documentation and standard operating procedures.
(c) Assuring that equipment/machinery is available.
(d) Ensuring environmental control where applicable.
(e) Ensuring preparation of production/compounding processes according to product specifications, labelling and batching and legal requirements.

Assessment (Tick appropriate box)
Does this outcome form part of my current practice of pharmacy?
Yes ☐ No ☐

IF YES, on the basis of the evidence I have identified I can do this

1.4 Prepare for line-opening/line clearance (manufacturing).

A person who has achieved this outcome is capable of
(a) Ensuring that the work stations are clear of materials and products.
(b) Performing line-opening according to standard operating procedures.
(c) Ensuring that personnel adhere to procedures insofar as hygiene and dress.
(d) Checking batch records and other applicable documentation with respect to the process being performed for the correct identity and batch details.

Assessment (Tick appropriate box)
Does this outcome form part of my current practice of pharmacy?
Yes ☐ No ☐

IF YES, on the basis of the evidence I have identified I can do this

1.5 Control the production of pharmaceutical products (manufacturing).

A person who has achieved this outcome is capable of
(a) Ensuring the addition of raw materials according to batch documentation and standard operating procedures.
(b) Assuring that the mixture is processed/compounded according to production procedures/method on manufacturing record sheet.
(c) Controlling and authorise preparation process up to final dosage form.
(d) Monitoring and adjust process to ensure compliance with product specifications where necessary (in-process quality control) according to batch documentation.
(e) Ensuring that any other related actions to enable the manufacturing/compounding process to run according to schedule are carried out.
(f) Controlling and authorising the packaging of bulk products in containers or into patient ready units.
(g) Controlling and authorise the labelling of containers according to product specifications.

Assessment (Tick appropriate box)
Does this outcome form part of my current practice of pharmacy?
Yes ☐ No ☐
1.6 **Control the production of pharmaceutical products (institutional, community, manufacture).**

A person who has achieved this outcome is capable of

(a) Ensuring the addition of raw materials or component products according to standard operating procedures.
(b) Assuring that the mixture is processed/compounded according to correct procedures/methods.
(c) Packaging of products in containers or into patient ready units.
(d) **Labelling of containers according to legal requirements.**

**Assessment (Tick appropriate box)**
Does this outcome form part of my current practice of pharmacy?

Yes [ ] No [ ]

IF YES, on the basis of the evidence I have identified I can do this

1.7 **Ensure that in-process control, quality testing and quality awareness is maintained throughout the process (manufacturing).**

A person who has achieved this outcome is capable of

(a) Ensuring that all raw materials and componentry are tested and released according to standard operating procedures prior to use.
(b) Ensuring that batch integrity is maintained according to batch documentation and standard operating procedures.
(c) Ensuring that cross-contamination cannot occur according to standard operating procedures.
(d) Ensuring that in-process testing is carried out in accordance with documentation and procedures.
(e) Ensuring that all personnel adhere to quality measures and systems according to Good Manufacturing Practices.
(f) **Ensure that the final product is released according to specifications.**

**Assessment (Tick appropriate box)**
Does this outcome form part of my current practice of pharmacy?

Yes [ ] No [ ]

IF YES, on the basis of the evidence I have identified I can do this

1.8 **Manage deviations; take corrective action and record findings (manufacturing).**

A person who has achieved this outcome is capable of

(a) Evaluating discrepancies and take corrective action according to standard operating procedures.
(b) Recording findings and report to management where applicable.
(c) Taking measures to prevent re-occurrence of deviations according to standard operating procedures.
Assessment (Tick appropriate box)
Does this outcome form part of my current practice of pharmacy?
Yes ☐ No ☐

IF YES, on the basis of the evidence I have identified I can do this

1.9 Ensure systems and procedures are adhered to (manufacturing).

A person who has achieved this outcome is capable of
(a) Adhering to and apply standard operating procedures during pharmaceutical operations.

Assessment (Tick appropriate box)
Does this outcome form part of my current practice of pharmacy?
Yes ☐ No ☐

IF YES, on the basis of the evidence I have identified I can do this

1.10 Ensure documents are completed and records maintained (manufacturing).

A person who has achieved this outcome is capable of
(a) Demonstrating an understanding of the application and importance of documentation.
(b) Assisting in the compilation, control and maintenance of documentation.
(c) Controlling record-keeping and the application of documentation in the pharmaceutical processes.

Assessment (Tick appropriate box)
Does this outcome form part of my current practice of pharmacy?
Yes ☐ No ☐

IF YES, on the basis of the evidence I have identified I can do this

1.11 Control and lead the line-closing/shutdown of the pharmaceutical process (manufacturing).

A person who has achieved this outcome is capable of
(a) Ensuring that the area is cleared and cleaned according to standard operating procedures.
(b) Checking for completion of documentation and records.
(c) Controlling the reconciliation of product/component/printing material.
(d) Controlling returns to the correct storage bins according to standard operating procedures.
(e) Evaluate discrepancies and take corrective actions.
(f) Ensuring the correct disposal of waste products and hazardous substances according to standard operating procedures.
(g) Assuring that products are placed in quarantine awaiting final release.
### 1.12 Lead and participate in the work team.

**A person who has achieved this outcome is capable of**

1. Planning and **organising** the work team to optimise output, quality and cost.
2. Identifying, clarify, respond to and resolve work related problems within the team to achieve optimum performance.
3. Identifying and respond to industrial relations issues timeously in a way that balances the interests of worker and management within the legal requirements.
4. Organising and conducting regular meetings with team members to determine courses of action to deal with problems affecting productivity.
5. Evaluating staff performance in key performance areas against agreed outcomes.
6. Establishing and maintain effective lines of communication within the team.

**Assessment (Tick appropriate box)**

Does this outcome form part of my current practice of pharmacy?

Yes ☐  No ☐

**IF YES,** on the basis of the evidence I have identified I can do this.

### 1.13 Training of pharmacist interns and pharmacist’s assistants in-training to achieve the capability in manufacturing, compounding and packaging of pharmaceutical products.

**A person who has achieved this outcome is capable of**
(a) Familiarising the pharmacist interns and pharmacist's assistants in-training with the standard operating procedures in manufacturing, compounding and packaging / pre-packing of pharmaceutical products.

(b) Familiarising the pharmacist interns and the pharmacist's assistants in-training with the terminology in manufacturing, compounding, packaging / pre-packing of pharmaceutical products.

(c) Familiarising the pharmacist interns and the pharmacist's assistants in-training with the equipment and machinery in manufacturing, compounding, packaging / pre-packing of pharmaceutical products.

(d) Familiarising the pharmacist interns and the pharmacist's assistants in-training with the operating processes in manufacturing, compounding, packaging / prepping of pharmaceutical products.

(e) Familiarising the pharmacists’ assistants and pharmacist intern with the quality control procedures in the manufacturing, compounding and packaging of pharmaceutical products.

(f) Assisting the pharmacist interns and pharmacist's assistants in-training in the self-assessment of their capabilities against determined unit standards.

(g) Assisting tutor and provide in-service guidance to the pharmacist interns and the pharmacist’s assistant in-training in manufacturing, compounding, packaging / pre-packing of pharmaceutical products.

(h) Assessing progress of the pharmacist interns and the pharmacist's assistants in training and provide feedback.

(i) Assisting the pharmacist interns and pharmacist's assistants in-training in solving relevant learning problems experienced in manufacturing, compounding, packaging / pre-packing of pharmaceutical products.

Assessment (Tick appropriate box)

Does this outcome form part of my current practice of pharmacy?

Yes [ ] No [ ]

IF YES, on the basis of the evidence I have identified I can do this

2. **COMPETENCY STANDARD TWO: ORGANISE THE PROCUREMENT, STORAGE AND DISTRIBUTION OF PHARMACEUTICAL MATERIALS AND PRODUCTS**

<table>
<thead>
<tr>
<th>Does this standard apply to me?</th>
</tr>
</thead>
<tbody>
<tr>
<td>The standard applies to all pharmacists who play a role in organising the procurement, storage and distribution of pharmaceutical materials and products.</td>
</tr>
</tbody>
</table>

**INTRODUCTION**

The procurement, storage and distribution of pharmaceutical products is a major determinant in the availability of drugs and health care costs. Given the impact of procurement activities on the operation and effectiveness of health services, it is essential that these activities be managed by pharmacists trained in using sound procedures, with access to reliable stock control, consumption and distribution information. Effective procurement, storage and distribution of medicines requires managerial, pharmaceutical and economic expertise.

The pharmacist plays an important role in the procurement of medicines, quantification of drug requirements, approval and selection of suppliers, quality control programmes and the relevant financial mechanisms required in this process. The management of effective medicine stock levels and the maintenance of the safety and efficacy of stock are also an important responsibility of the pharmacist.

Obtaining good quality drugs involves careful selection of suppliers and products who adhere to Good Manufacturing Practices, knowledge of packaging, storage and transport requirements of drugs and a sound knowledge of the relevant legislation.

The pharmacist is an important role player in the distribution of medicines. Effective drug distribution ensures a constant supply of drugs, effective storage of drugs and cost effective accessibility of medicines to the community at large. Operational planning and logistic skills are essential in maintaining a cost-effective distribution system.

The pharmacist should at least have a good knowledge of the components of the procurement, storage and distribution of pharmaceutical products including but not limited to:

(a) the principles of stock control with respect to storage conditions, security, legal aspects and stock rotation;
(b) the financial implications of procurement, storage and distribution of medicines;
(c) an understanding of the management principles involved in the procurement, storage and distribution of medicines and other pharmaceutical products;
(d) the relevant legislation applicable in the effective control of medicines and other related substances;
(e) communication skills, including the ability to apply technological advances in communication in the procurement and distribution process, and to maintain effective communication lines between suppliers and users of medicines;
(f) record keeping, statistical methodologies and research methods to ensure optimum medicine supplies to the patient and/or community.

The competencies required for the procurement, storage and distribution of medicines include the ability to lead and participate in a work team, and to assist in the training of staff members to ensure that effective medicine distribution occurs.

The standard presented here reflects those competencies required for the pharmacist to demonstrate capability in controlling the acquisition, storage and distribution of pharmaceutical
materials as determined by consultation with the pharmaceutical manufacturing industry, the pharmaceutical distribution industry, hospital pharmacy and community pharmacy.

The outcomes and assessment criteria are workplace related and represent the minimum assessment criteria for the evaluation of competency within the pharmacy workplace.

**CAPABILITY AND OUTCOMES**

A person who has achieved this standard is capable of controlling the procurement, ordering, receiving, sampling, releasing, storing, preparing for dispatch, controlling transport and keeping records of pharmaceutical materials and products in compliance with legal and technical requirements.

The following outcomes of this capability should be demonstrated by the candidate:

2.1 **Organise and control the procurement and receipt of pharmaceutical materials and products.**

<table>
<thead>
<tr>

3. **COMPETENCY STANDARD THREE: DISPENSE AND ENSURE THE OPTIMAL USE OF MEDICINES PRESCRIBED TO THE PATIENT.**

<table>
<thead>
<tr>
<th>Does this standard apply to me?</th>
</tr>
</thead>
<tbody>
<tr>
<td>The standard applies to all pharmacists who are required to dispense medicines in their current pharmacy practice</td>
</tr>
</tbody>
</table>

**INTRODUCTION**

The role of the pharmacist in drug supply has altered significantly by moving from a product centred approach to pharmaceutical care which is patient centred. A decrease in the need to compound medicines and an increase in the complexity and potency of available medicines have resulted in the need for the pharmacist’s involvement in the use of the drugs by the patient. The pharmacist plays a crucial role in the therapeutic process, by ensuring the quality use of medicine in the country.

The quality use of medicines includes patient care encounters, prescription review, and medicine utilisation review. It includes the dispensing process and the provision of pharmaceutical care by the pharmacist. Pharmaceutical care may be defined as “to find and solve the drug therapy problems of each individual patient” and has three essential elements, namely:

- a philosophy of practice;
- the patient care process; and
- a practice management system

This includes addressing and caring for the needs of the patient by practising according to a patient care model in the pharmacy, developing an appropriate care plan to resolve problems and determine the goals of therapy and to do follow-up evaluations. An effective practice management system must also be developed by the pharmacist.

The dispensing process, as a component of pharmaceutical care, may be seen as that process in which the pharmacist prepares and distributes to a patient a course of therapy on the basis of a prescription. It involves the correct interpretation of the wishes of the prescriber and the accurate preparation and labelling of medicine for use by the patient as advised. The term dispensing process may be seen as covering all the activities involved, from receiving the prescription to issuing the prescribed medicine to the patient including:

- receiving and validating the prescription;
- understanding and interpreting the prescription;
- preparing the items for issue;
- recording the actions taken; and
- issuing the medicine to the patient with clear instructions and advice.

**The aim of any drug management system is to deliver the correct medicine to the patient requiring such medicine. The pharmacist is also required to demonstrate competency in the management of rational drug use with underpinning knowledge that will ensure that the quality use of medicines provides for:**

- the provision of the correct drug for a particular indication;
- the appropriate drug in terms of safety, efficacy, and suitability;
- the appropriate dosage;
• correct dispensing, including the provision of the correct information about the prescribed medicines; and
• ensuring patient adherence to the treatment.

Pharmacist intervention plays a major role in the provision of medicines to the patient, and the pharmacist should demonstrate an understanding of the reasons for pharmacist interventions, how to identify problems, how to correct the problems, and how and when to provide possible alternatives to ensure the quality use of medicines.

• Good dispensing practices ensure that an effective form of the correct drug is delivered to the right patient, in the prescribed dosage and quantity, with clear instructions, and in a package that maintains the efficacy of the drug. The pharmacist should have a knowledge of the components of the dispensing process and ensuring the optimal use of medicines as prescribed to the patient, including but not limited to the following:
  o an understanding of how medicines are formulated and manufactured;
  o the capability to prepare medicine extemporaneously;
  o the interpretation of prescriptions and other orders for medicines in accordance with legislation and codes of professional conduct and practice;
  o the selection of drugs and the use of essential drug lists and formularies;
  o the provision of advice to patients and other health care professionals about medicines and their usage, including knowledge of health care systems and the relationships of the community/patient to health care in general.
  o the pharmacotherapy of various conditions for which treatment may be initiated at a primary level;
  o communication skills, including the ability to illicit an appropriate patient profile and the ability to provide information to ensure the quality use of medicines and/or non-treatment advice;
  o the pharmacodynamics, pharmacokinetics and pharmaco economics of medicine therapy;
  o the legal aspects relating to the practice of pharmacy;
  o an understanding of the principles of good management good pharmacy practice, and multidisciplinary co-operation.

The standard presented here reflects those competencies required for the pharmacist to demonstrate capability in dispensing medicines and ensuring the optimum use of prescribed medicines by the patient, including the implementation and monitoring of a pharmaceutical care plan. The standard was determined by consultation with hospital and community pharmacists and other relevant health professionals. The outcomes and assessment criteria are workplace related and represent the minimum assessment criteria for the evaluation of competency within the pharmacy workplace.

CAPABILITY AND OUTCOMES

A person who has achieved this standard is capable of supplying medicines to humans and animals on the prescription of an authorised prescriber. This implies the gathering of all information required to assess and prepare a prescription, applying pharmaceutical techniques and principles; providing information and counselling to the patient/care giver on the optimal use of the prescribed medicine; implementing a care plan and monitoring the therapeutic outcomes thereof.
3.1 Read and evaluate the prescription.

<table>

IF YES, on the basis of the evidence I have identified I can do this.
3.7 Prepare the prescription.

A person who has achieved this outcome is capable of

(a) Identifying generic substitutes for the issuing of prescription items according to legal requirements.
(b) Preparing prescription items according to good pharmacy practice and legal requirements.
(c) Applying pharmaceutical principals and techniques to the preparation of the prescription.

Assessment (Tick appropriate box)

Does this outcome form part of my current practice of pharmacy?

Yes ☐ No ☐

IF YES, on the basis of the evidence I have identified I can do this

3.8 Provide drugs, instructions and advice on the use of the prescribed medication.

A person who has achieved this outcome is capable of

(a) Handling the medicine to the patient in a professional and ethical manner.
(b) Communicating in a manner which demonstrates sensitivity for alternative customs and approaches to health care.
(c) Providing the patient with instructions on the safe and efficacious use of medicines.
(d) Providing additional instruction using instructional aids where appropriate.
(e) Demonstrating the correct method of administration of the medicine where appropriate.

Assessment (Tick appropriate box)

Does this outcome form part of my current practice of pharmacy?

Yes ☐ No ☐

IF YES, on the basis of the evidence I have identified I can do this

3.9 Counsel patients to encourage compliance with the recommended therapy regimens.

A person who has achieved this outcome is capable of

(a) Establishing what the patient already knows about the medicine and the needs for counselling.
(b) Formulating counselling plan according to the needs of the patient to ensure the safe and efficacious use of medicines.
(c) Requesting feedback from the patient to confirm understanding of the information provided in the counselling process.

Assessment (Tick appropriate box)

Does this outcome form part of my current practice of pharmacy?

Yes ☐ No ☐

IF YES, on the basis of the evidence I have identified I can do this

3.10 Maintain records.
A person who has achieved this outcome is capable of

(a) Maintaining the necessary legal and professional records according to Good Pharmacy Practice guidelines and regulatory requirements.

Assessment (Tick appropriate box)
Does this outcome form part of my current practice of pharmacy?
Yes ☐ No ☐

IF YES, on the basis of the evidence I have identified I can do this

3.11 Monitor the drug therapy.

A person who has achieved this outcome is capable of

(a) Assessing the patient for signs of compliance with, effectiveness and safety of the medicine.
(b) Identifying areas for modification and take the appropriate action.

Assessment (Tick appropriate box)
Does this outcome form part of my current practice of pharmacy?
Yes ☐ No ☐

IF YES, on the basis of the evidence I have identified I can do this

3.12 Training of pharmacist interns and pharmacist’s assistants in-training to achieve capability in dispensing and to ensure the optimal use of medicines prescribed to the patient.

A person who has achieved this outcome is capable of

(a) Familiarising pharmacist intern and assistants in-training with the correct procedures in dispensing and to ensure the optimal use of medicines prescribed to the patient.
(b) Familiarising the pharmacist’s intern and assistants in-training with the terminology used in dispensing and to ensure the optimal use of medicines prescribed to the patient.
(c) Familiarising the pharmacists’ assistants and pharmacist’s intern with the equipment and pharmaceutical processes in dispensing and to ensure the optimal use of medicines prescribed to the patient.
(d) Familiarising the pharmacists’ assistants and pharmacist’s intern with the quality control procedures in dispensing and to ensure the optimal use of medicines prescribed to the patient.
(e) Assisting pharmacists’ assistants and pharmacist intern in the self-assessment of their capabilities against determined unit standards.
(f) Providing in-process guidance to the pharmacists’ assistants and pharmacist’s intern in dispensing and to ensure the optimal use of medicines prescribed to the patient.
(g) Assessing progress of the pharmacists’ assistants and pharmacist’s intern and provide feedback.
(h) Assisting pharmacists’ assistants and pharmacist intern solving relevant learning problems in dispensing and to ensure the optimal use of medicines prescribed to the patient.

Assessment (Tick appropriate box)
Does this outcome form part of my current practice of pharmacy?
Yes ☐ No ☐

IF YES, on the basis of the evidence I have identified I can do this

**Assessment (Tick appropriate box)** - In general, does Standard 3 form part of my current practice of pharmacy?

Yes [ ]  
No [ ]

IF YES,

☐ I have assessed my competency in this standard and can provide evidence in all of the elements  

☐ I have assessed my competency in this standard and will undertake CPD in the outcomes that I currently cannot provide evidence for, in order to meet all the requirements of this standard
4. **COMPETENCY STANDARD FOUR: PROVIDE PHARMACIST INITIATED CARE TO THE PATIENT AND ENSURE THE OPTIMAL USE OF MEDICINE**

**Does this standard apply to me?**

The standard applies to all pharmacists who are required to give advice and recommendations, and whose actions have a direct impact on patient outcome.

**INTRODUCTION**

The pharmacist plays an important role in the provision of accessible and affordable healthcare to the community. The availability of specialised pharmaceutical knowledge at a primary level is an important component in the delivery of effective primary health care.

The pharmacist is often required to make important clinical decisions in the pharmacy based entirely on the patient’s history, observation of symptoms, and the application of the pathogenesis and symptomology of a variety of disease conditions. Specific competencies and skills are required by the pharmacist to develop a pharmaceutical care plan that will result in the appropriate treatment of the identified condition, the provision of advice and/or the referral of the patient for further medical attention. Of particular importance is that the pharmacist knows when to refer a patient to a medical practitioner or other health care professional.

The provision of pharmacist initiated care incorporates the practice of pharmaceutical care in ensuring the quality use of medicines by the patient. It includes the dispensing process and the provision of pharmaceutical care by the pharmacist.

Pharmaceutical care may be defined as “to find and solve the drug therapy problems of each individual patient” and has three essential elements, namely:

- a philosophy of practice;
- the patient care process; and
- a practice management system

This includes addressing and caring for the needs of the patient by practising according to a responsible patient care model in the pharmacy, developing an appropriate care plan to resolve problems and determine the goals of therapy and to do follow-up evaluations. An effective practice management system must also be developed by the pharmacist.

In the provision of rational pharmacist initiated care to the patient and ensuring the quality use of medicines, emphasis is placed on the ability of the pharmacist to develop a pharmaceutical care plan that will result in the appropriate treatment of the identified condition, the provision of advice and/or the referral of the patient for further medical attention.

The pharmacist should at least have a good knowledge of the components of providing care at a primary level including but not limited to the following:

- the pathogenesis and symptomology of a variety of disease conditions encountered at a primary care level;
- the pharmacotherapy of various conditions for which treatment may be initiated at a primary level;
- communication skills, including the ability to illicit an appropriate patient profile and the ability to provide information to ensure the quality use of medicines and/or non-treatment advice;
• the pharmacodynamics, pharmacokinetics and pharmacoconomics of medicine therapy at a primary care level;
• the properties of various dosage forms and their application in pharmacy practice;
• the legal aspects relating to the practice of pharmacy;
• an understanding of the principles of good management, good pharmacy practice, and multidisciplinary co-operation;
• treatment modalities, including the use of essential drug list medicines, applied drug information and the monitoring of therapeutic outcomes to ensure positive outcomes of pharmacist initiated treatment at primary care levels;
• pharmaceutical knowledge, including dosage forms, quality assurance, pharmaceutical stability, and good dispensing practice;
• an understanding of the promotion of animal health and the effects thereof on the health care of the community.

The pharmacist is expected to have a solid base-line knowledge of disease pathogenesis, symptomology, epidemiology, treatment modalities and pathophysiology to ensure competency in the provision of primary care therapy to the community.

The pharmacist must have an understanding of the components of providing rational pharmacist initiated care to the patient and ensuring the quality use of medicines including the principles of patient profiles, pharmacist initiated treatment and pharmaceutical care in primary care treatment.

The standard presented here reflects those competencies required for the entry level pharmacist to demonstrate capability in assessing the medicine and health needs of the patient, identifying signs and symptoms of various diseases conditions, and implementing and monitoring a pharmaceutical care plan. The standard was determined by consultation with hospital and community pharmacists and other relevant health professionals. The outcomes and assessment criteria are workplace related and represent the minimum assessment criteria for the evaluation of competency within the pharmacy workplace.

CAPABILITY AND OUTCOMES

A person who has achieved this standard is capable of assessing the medicine and health needs of the patient, identifying the patient’s signs and symptoms, devising, documenting and implementing a pharmaceutical care plan and monitoring the outcome.

The following outcomes of this capability should be demonstrated by the candidate:

4.1 Determine the reason for request for service.

<table>
<thead>
<tr>
<th>A person who has achieved this outcome is capable of</th>
</tr>
</thead>
<tbody>
<tr>
<td>(a) Communicating effectively to determine the person’s needs.</td>
</tr>
<tr>
<td>(b) Approaching person in a manner, which shows sensitivity to needs and culture.</td>
</tr>
<tr>
<td>(c) Deciding on the basis of information obtained to provide product, advice or information or to take patient history.</td>
</tr>
<tr>
<td>(d) Refer the person for further investigation by another health care professional where warranted.</td>
</tr>
</tbody>
</table>

Assessment (Tick appropriate box)

</table>

**Assessment (Tick appropriate box)**

Does this outcome form part of my current practice of pharmacy?

| Yes ☐ No ☐ |

**IF YES**, on the basis of the evidence I have identified I can do this
### 4.5 Refer patient to other health care professionals where appropriate.

**A person who has achieved this outcome is capable of**

(a) Referring patient to appropriate health care professional if:
   - patient condition warrants further investigation;
   - therapy taken by patient fails in purpose
   - therapy taken by patient causes an untoward effect
   - consequences of drug abuse or toxic doses of drugs or chemicals cannot be treated
(b) Referring patient in a professional and ethical manner.

**Assessment (Tick appropriate box)**

Does this outcome form part of my current practice of pharmacy?

Yes [ ] No [ ]

**IF YES**, on the basis of the evidence I have identified I can do this

### 4.6 Identify patient signs and symptoms.

**A person who has achieved this outcome is capable of**

(a) Observing patient for behaviour and obvious physical signs.
(b) Identifying signs and symptoms.
(c) Performing appropriate diagnostic tests.
(d) Using correct test methodology and sampling procedures.
(e) Interpreting signs, symptoms and data correctly.
(f) Demonstrating sensitivity for alternative customs and approaches to health care.

**Assessment (Tick appropriate box)**

Does this outcome form part of my current practice of pharmacy?

Yes [ ] No [ ]

**IF YES**, on the basis of the evidence I have identified I can do this

### 4.7 Devise an appropriate care plan in consultation with patient.

**A person who has achieved this outcome is capable of**

(a) Identifying cause of observed signs and symptoms by reconciling the latter with the history, observations, examination, and the diagnostic tests performed.
(b) **Referring** patient if interpreted information requires further investigation by another health care professional in accordance with good pharmacy practice guidelines.
(c) Selecting appropriate care plan according to the interpretation of patient information.
(d) Devising an appropriate plan to provide for patient advice, treatment or intervention if not referred.
(e) Demonstrating sensitivity for alternative approaches and customs in health care.
(f) Applying first aid measures where necessary.
(g) Planning follow-up monitoring and evaluation process in consultation with the patient.
### 4.8 Monitor, evaluate and adjust care plan.

**A person who has achieved this outcome is capable of**

- (a) Following up care plan and assess the patient for compliance, effectiveness and safe use of the medicine.
- (b) Evaluating feedback and adjust care plan appropriately.

**Assessment (Tick appropriate box)**

Does this outcome form part of my current practice of pharmacy?

| Yes □ | No □ |

*IF YES*, on the basis of the evidence I have identified I can do this

### 4.9 Implement the care plan.

**A person who has achieved this outcome is capable of**

- (a) Referring the patient professionally and ethically where necessary.
- (b) Providing an emergency supply of medicines where situation warrants it.
- (c) Giving appropriate advice clearly and accurately where necessary.
- (d) Issuing appropriate medicine and provide advice on medicine where appropriate.
- (e) Recommending non-drug management including no treatment and appropriate information and/or advice.
- (f) Ascertaining whether the patient understood the information and/or advice given.
- (g) Administering drug or treatment.
- (h) Intervening in the medicine needs of the patients.
- (i) Keeping all records in the appropriate prescribed manner in accordance with legal requirements.

**Assessment (Tick appropriate box)**

Does this outcome form part of my current practice of pharmacy?

| Yes □ | No □ |

*IF YES*, on the basis of the evidence I have identified I can do this
4.10 Training pharmacist interns to provide pharmacist initiated care to the patient and ensure the optimal use of medicines.

A person who has achieved this outcome is capable of

(a) Familiarising the pharmacist’s intern with the correct procedures in providing pharmacist initiated care to the patient and to ensure the optimal use of medicine.
(b) Familiarising the pharmacist intern with the terminology used in providing pharmacist initiated care to the patient and to ensure the optimal use of medicine.
(c) Familiarising the pharmacist's intern with the correct methods of eliciting patient history, referring the patient to another health care professional where appropriate and advising the patient on the safe use of requested medicines.
(d) Familiarising the pharmacist intern with the principles of identifying patient signs and symptoms, and devising, implementing and monitoring an appropriate care plan in consultation with the patient.
(e) Assisting the pharmacist intern in the self-assessment of their capabilities against determined unit standards.
(f) Providing guidance to the pharmacist intern in providing pharmacist initiated care to the patient and to ensure the optimal use of medicine.
(g) Assessing progress of the pharmacist intern and provide feedback.
(h) Assisting the pharmacist intern in solving relevant learning problems in providing pharmacist initiated care to the patient and to ensure the optimal use of medicine.

Assessment (Tick appropriate box)
Does this outcome form part of my current practice of pharmacy?
Yes ☐  No ☐

IF YES, on the basis of the evidence I have identified I can do this

**Assessment (Tick appropriate box)** - In general, does **Standard 4** form part of my current practice of pharmacy?

| Yes | No |

**IF YES,**

- [ ] I have assessed my competency in this standard and can provide evidence in all of the elements
- [ ] I have assessed my competency in this standard and will undertake CPD in the outcomes that I currently cannot provide evidence for, in order to meet all the requirements of this standard
5. **COMPETENCY STANDARD FIVE: PROVIDE INFORMATION AND EDUCATION ON HEALTH CARE AND MEDICINE**

**Does this standard apply to me?**

The standard applies to pharmacists who are required to give advice, recommendations and actions have a direct impact on patient outcome.

**INTRODUCTION**

The provision of drug and health care information and education forms an integral part of the scope of practice of the pharmacist. This requires the provision of information to the patient and to other members of the healthcare team. The entry level pharmacist should at least have a good knowledge of the components of communicating information on the use of drugs, disease states and health care to the patient and other health care workers, including but not limited to:

- identifying the information needs;
- appropriate communication of the information;
- common human and veterinary disease states;
- sourcing and interpreting information from relevant reference sources;
- the relevant legislation.

Education of the patient on the prevention and treatment of commonly encountered disorders and healthy life styles also forms an important component of this capability.

The standard presented here reflects those competencies required for the entry level pharmacist to demonstrate capability in assessing and supplying the information needs of the patient and other health care workers. The standard was determined by consultation with the pharmaceutical manufacturing industry, the pharmaceutical distribution industry, hospital and community pharmacy. The outcomes and assessment criteria are workplace related and represent the minimum assessment criteria for the evaluation of competency within the pharmacy workplace.

**CAPABILITY AND OUTCOMES**

A person who has achieved this standard is capable of accessing, interpreting, evaluating and supplying information on the nature and use of drugs, disease states and health care to the public, health care providers and patients.

The following outcomes of this capability should be demonstrated by the candidate:
5.1 Provide information on request.

A person who has achieved this outcome is capable of

(a) Identifying information needs.
(b) Interpreting request for level, content and final use of information.
(c) Deciding to either refer or accept the request.
(d) Using appropriate source.
(e) Evaluating information for relevance and scientific integrity.
(f) Communicating information promptly, clearly and accurately.
(g) Verifying that information was understood.
(h) Ascertaining that the information supplied meets the need of the recipient.

Assessment (Tick appropriate box)
Does this outcome form part of my current practice of pharmacy?
Yes ☐ No ☐

IF YES, on the basis of the evidence I have identified I can do this

5.2 Initiate and/or participate in the provision of health care education and information to the public and other health care professionals information on request.

A person who has achieved this outcome is capable of

(a) Identifying targeted educational and information need.
(b) Selecting appropriate method of delivery of information.
(c) Accessing relevant information and process.
(d) Communicating information clearly and accurately.
(e) Ensuring that the information was understood by the audience
(f) Ascertaining that the information supplied met the perceived needs of the target audience.

Assessment (Tick appropriate box)
Does this outcome form part of my current practice of pharmacy?
Yes ☐ No ☐

IF YES, on the basis of the evidence I have identified I can do this

5.3 Interpret scientific information to provide basis for rational drug use.

A person who has achieved this outcome is capable of

(a) Retrieving data from appropriate sources.
(b) Evaluating information for relevance against need.
(c) Interpreting data to draw conclusions on rational drug use and evidence-based treatment.

Assessment (Tick appropriate box)
Does this outcome form part of my current practice of pharmacy?
Yes ☐ No ☐

IF YES, on the basis of the evidence I have identified I can do this
5.4 Training of the pharmacist intern in providing information and education in health care and medicine.

A person who has achieved this outcome is capable of

(a) Familiarising the pharmacist intern with the correct procedures in conducting and providing effective education and information programmes.
(b) Familiarising the pharmacist intern with the terminology used in conducting and providing effective education and information programmes.
(c) Familiarising the pharmacist intern with the correct methods of organising the retrieval and presentation of relevant information to meet the educational and other information needs of the public and other health care providers.
(d) Familiarising the pharmacist intern with the principles of communicating information in a clear and systemic manner and to present conclusions on rational drug uses clearly and convincingly.
(e) Assisting the pharmacist intern in the self-assessment of their capabilities against determined unit standards.
(f) Providing guidance to the pharmacist intern in conducting and providing effective education and information programmes to the public and other health care professionals.
(g) Assessing progress of the pharmacist intern and provide feedback.
(h) Assisting the pharmacist intern in solving relevant learning problems in conducting and providing effective education and information programmes.

Assessment (Tick appropriate box)

**Does this standard apply to me?**

Promote community health and provide related information and advice

**INTRODUCTION**

As an accessible member of the health care team, the pharmacist plays an important role in the maintenance of the health of the community. The promotion of health by the implementation of disease prevention programmes in the community at large, screening programmes to identify community health deficiencies and responding to epidemiological trends in the community are important roles of the pharmacist in his or her role as a health care provider.

The pharmacist should at least have a good knowledge of the components of community health including but not limited to:

- identifying the health education needs of the community;
- communicating the relevant information to the community;
- conducting screening programmes within the community that will promote good health and healthy life-styles;
- applying national health policies, for example, immunisation programmes, and primary and preventative programmes; involvement in community health projects;
- the relevant legislation.

The pharmacist must also have a good base-line knowledge of community health educational requirements and the capability to assist in the development of appropriate programmes that will ensure that community centred concerns including infectious diseases, substance abuse, and occupational health, are communicated effectively and addressed with the community at large.

The standard presented here reflects those competencies required for the pharmacist to demonstrate capability in assessing and providing for the community health needs of the community. The standard was determined after consultation with the hospital and community sectors of pharmacy. The outcomes and assessment criteria are workplace related and represent the minimum assessment criteria for the evaluation of competency within the pharmacy workplace.

**CAPABILITY AND OUTCOMES**

A person who has achieved this standard is capable of identifying community health needs, planning and implementing promotive and preventive programmes, including screening, directly observed therapy and immunisation

The following outcomes of this capability should be demonstrated by the candidate:
6.1 Identify the health education needs of the community.

A person who has achieved this outcome is capable of

(a) Identifying trends in requests for information and medicine relating to community and occupational health needs.
(b) Relating identified trends to community health needs.

**Assessment (Tick appropriate box)**

Does this outcome form part of my current practice of pharmacy?

Yes [ ] No [ ]

**IF YES**, on the basis of the evidence I have identified I can do this

6.2 Promote promotive and preventative health education.

A person who has achieved this outcome is capable of

(a) Deciding on an appropriate response to the identified.
(b) Identifying health education needs.
(c) Selecting a method of delivery that is appropriate to the nature of the identified education needs and the target community.
(d) Retrieving and process information relevant to the identified needs.
(e) Communicating information clearly and accurately.
(f) Verifying for the effectiveness of the education programme.
(g) Ascertaining that the information supplied meets the perceived needs of the target audience.
(h) Preparing and provide community health education programmes for presentation by members of the community.

**Assessment (Tick appropriate box)**

Does this outcome form part of my current practice of pharmacy?

Yes [ ] No [ ]

**IF YES**, on the basis of the evidence I have identified I can do this

6.3 Initiate and participate in community health projects.

A person who has achieved this outcome is capable of

(a) Identifying and evaluate existing and potential local community health projects.
(b) Initiating and/or participate in community health projects.
(c) Participating in directly observed therapy (DOT) programmes.
(d) Participating in screening tests for public health authorities.
(e) Initiating an appropriate response to the requirements of the community health projects.
(f) Participating according to identified role for the pharmacist.
(g) Following up and evaluating outcomes of the projects.

**Assessment (Tick appropriate box)**

Does this outcome form part of my current practice of pharmacy?

Yes [ ] No [ ]

**IF YES**, on the basis of the evidence I have identified I can do this
6.4 Conduct screening programmes to identify health deficiencies in the community.

A person who has achieved this outcome is capable of

(a) Identifying areas where screening can be done to identify health deficiencies and deviations in the community.
(b) Planning, organising and publicising screening activity.
(c) Checking operation of equipment, materials and reagents.
(d) Conducting an effective screening programme.
(e) Identifying patients needing follow-up care and advice and/or refer appropriately.
(f) Following up for patient compliance for referral advice.
(g) Maintaining documentation according to legal requirements and Good Pharmacy Practices.

Assessment (Tick appropriate box)
Does this outcome form part of my current practice of pharmacy?
Yes [ ] No [ ]

IF YES, on the basis of the evidence I have identified I can do this

6.5 Note and respond to epidemiological trends in the community, including reporting notifiable diseases.

A person who has achieved this outcome is capable of

(a) Noting and monitor epidemiological trends in the local community.
(b) Deciding whether to initiate formal research.
(c) Providing community education.
(d) Referring to appropriate authority.
(e) Advising community leaders (e.g. school principals).
(f) Detecting and reporting notifiable diseases according to legal requirements.

Assessment (Tick appropriate box)
Does this outcome form part of my current practice of pharmacy?
Yes [ ] No [ ]

IF YES, on the basis of the evidence I have identified I can do this

6.6 Participate in developing establishing and managing drug and health policies.

A person who has achieved this outcome is capable of

(a) Providing appropriate input in the formulation of drug and health policies in conjunction with a multi-disciplinary team.
(b) Participating in monitoring the implementation of the policies.

Assessment (Tick appropriate box)
Does this outcome form part of my current practice of pharmacy?
Yes [ ] No [ ]

IF YES, on the basis of the evidence I have identified I can do this
6.7 Training the pharmacist intern in the promotion of community health and the provision of information and advice.

A person who has achieved this outcome is capable of

(a) Familiarising the pharmacist intern with the correct procedures in identifying the health education needs and the epidemiological trends in a local community and devising appropriate programmes.
(b) Familiarising the pharmacist intern with the application of pharmaceutical skills and knowledge to conduct effective screening programmes in the community to identify health deficiencies in the community.
(c) Familiarising the pharmacist intern with the correct methods of organising effective community health projects, screening programmes and educational programmes.
(d) Familiarising the pharmacist intern with the principles of communicating information in a clear and systemic manner and to report epidemiological trends and notifiable diseases clearly and convincingly to relevant officials.
(e) Assisting the pharmacist intern in the self-assessment of their capabilities against determined unit standards.
(f) Providing guidance to the pharmacist intern in conducting and providing effective community education, information and screening programmes to the community.
(g) Providing guidance to the pharmacist intern to relate pharmaceutical, economic, social and governmental systems when providing input to health and drug policies.
(h) Assessing progress of the pharmacist intern and provide feedback.
(i) Assisting the pharmacist intern in solving relevant learning problems in conducting and providing effective community education, information and screening programmes.

Assessment (Tick appropriate box)

Does this outcome form part of my current practice of pharmacy?

Yes ☐ No ☐

IF YES, on the basis of the evidence I have identified I can do this

- **Yes** [ ] **No** [ ]

**IF YES,**
- [ ] I have assessed my competency in this standard and can provide evidence in all of the elements

- [ ] I have assessed my competency in this standard and will undertake CPD in the outcomes that I currently cannot provide evidence for, in order to meet all the requirements of this standard
7. **COMPETENCY STANDARD SEVEN: PARTICIPATE IN RESEARCH TO ENSURE THE OPTIMAL USE OF MEDICINES**

**Does this standard apply to me?**

The standard applies to all pharmacists

**INTRODUCTION**

As a member of the health care team, the pharmacist plays an important role in the performance of research. Although traditionally in pharmacy, research has been centred on the pharmaceutical sciences, there is an increasing need for research into aspects of pharmacy practice in order for a basis to be formed for the future development of policy. Practising pharmacists are increasingly taking part in health systems research, which must be encouraged as a means of providing data bases for future development. Such research is often conducted in collaboration with other health care providers.

Pharmacists should be able to participate in research including research into pharmacy practice, as well as the use of drugs in therapeutics. This research may include investigations into prescribing practices, patterns of drug usage, the monitoring of adverse reactions, the pharmacist’s advisory role, computerised data handling, health economics, legislation, and the various aspects of abuse and non-rational use of drugs. Another important role filled by pharmacists in South Africa is in the registration process of medicines.

The pharmacist should at least have a basic knowledge of the following components including but not limited to:

- research methodology;
- the registration process of medicines;
- research and development of medicines;
- research into health-systems.

The standard presented here reflects those competencies required for the pharmacist to demonstrate the capability to participate in research. The standard was determined after consultation with the pharmaceutical industry, the pharmaceutical distribution industry, hospital and community pharmacy. The outcomes and assessment criteria are workplace related and represent the minimum assessment criteria for the evaluation of competency of outcome criteria for a competent pharmacist.

**CAPABILITY AND OUTCOMES**

A person who has achieved this standard is capable of participating in research and applying research findings to health care

The following outcomes of this capability should be demonstrated by the candidate:
### 7.1 Participate in the research and development of medicines and health care strategies.

<table>

</tr>
</thead>
<tbody>
<tr>
<td>(a) Collating data relevant to the registration of a medicine.</td>
</tr>
<tr>
<td>(b) Compiling medicine registration application according to the relevant act for submission to the health authority.</td>
</tr>
<tr>
<td>(c) Maintaining, updating and reviewing documentation for product licences according to legal requirements.</td>
</tr>
<tr>
<td>(d) Communicating effectively with health authorities.</td>
</tr>
<tr>
<td>(e) Supplying principals with required information.</td>
</tr>
</tbody>
</table>

**Assessment (Tick appropriate box)**

Does this outcome form part of my current practice of pharmacy?

Yes □   No □

**IF YES**, on the basis of the evidence I have identified I can do this
7.3 Compliance with the legal requirements relating to the registration and control of medicines.

A person who has achieved this outcome is capable of

(a) Applying for and maintaining of the relevant licences, e.g. a manufacture or wholesale licence (MCC), premises licence (DoH), site recording with SAPC.
(b) Registration of the Responsible Pharmacist.
(c) Demonstrating an understanding of the legal issues regarding signing of documents.
(d) Understanding the Acts pertaining to the registration and control of registered and unregistered/investigational medicines, e.g. the Medicines and Related Substances Act, 1965 (Act 101 of 1965), Pharmacy Act, 1974 (Act 53 of 1974) and/or Foodstuffs, Cosmetics and Disinfectants Act, 1972 (act 54 of 1972) and/or Fertilizer, Farm feeds, Agricultural Remedies and Stock Remedies Act, 1947, (Act 36 of 1947).
(e) Understanding the special provisions for the use of unregistered medicines for either compassionate use or clinical research.
(f) Assuring that third party contracts and technical/GMP agreements are in place.
(g) Assuring Quality Management systems are in place.
(h) Assuring product labelling, advertising and promotional activity compliance.
(i) Assuring timeous payments of applicable SAPC and MCC annual fees.
(j) Obtaining required import and export permits.

Assessment (Tick appropriate box)
Does this outcome form part of my current practice of pharmacy?
Yes ☐ No ☐

IF YES, on the basis of the evidence I have identified I can do this

7.4 Ensure proper record keeping or maintenance of documents.

A person who has achieved this outcome is capable of

(a) Applying the basic principles of the record keeping and document control.
(b) Compilation and control of Standard Operating Procedures.
(c) Maintaining adequate medicine application documentation systems.
(d) Maintaining proper records of amendments/variations to medicine applications or dossiers.
(e) Maintaining proper records of regulatory commitments.
(f) Ensuring regulatory compliance and change control.
(g) Providing principals with required information, e.g. guidelines, applications, amendments, agreements, contracts.
(h) Applying Quality Risk Management.
(i) Understanding Master Batch Documentation and Executed Batch Records.
(j) Understanding the principles of recognised Pharmacopoeias as the basis of medicines control through adequate specification and control procedures.
(k) Understanding the principles of the control of active pharmaceutical ingredients (API’s), inactive pharmaceutical ingredients (IPI’s) and other items used in the manufacture of medicines.
(l) Understanding the principles of change control regarding all aspects of the control of medicines.
(m) Understanding the principles and requirements for the writing of package inserts and patient information leaflets based on approved reference books.
(n) Understanding the requirements for characterisation of API’s and batch to batch conformity.
(o) Understanding the principles of stability testing of API’s and final products.
(p) Understanding the principles of product development.
(q) Understanding, interpret and apply statistical analysis.
(r) Principles of demonstrating bioequivalence.
(s) Demonstrating an ability to compile and maintain Site Master Files

**Assessment (Tick appropriate box)**

Does this outcome form part of my current practice of pharmacy?

Yes ☐ No ☐

**IF YES,** on the basis of the evidence I have identified I can do this

7.5 **Compile and maintain a medicine registration dossier.**

**A person who has achieved this outcome is capable of**

(a) Evaluating and conducting due diligence on a registration dossier.
(b) Using the appropriate type of medicine registration application format.
(c) Compiling a medicine registration application in accordance with MCC and other guidelines, where relevant relating to medicine registration e.g. ICH, WHO, FDA, EMA, etc.
(d) Compiling and updating of the Package Insert (PI) and Patient Information Leaflet (PIL).
(e) Compiling, maintaining and understanding the significance of pharmaceutical development, specifications and control procedures for APIs, IPIs, container closure systems, finished pharmaceutical product; formulation/composition, manufacturing, stability of APIs and finished pharmaceutical products, pharmaceutical and biological availability, nonclinical and clinical evidence.
(f) Be able to compile a Common Technical Document (CTD).
(g) Demonstrating an understanding of regulatory compliance and change control.
(h) Demonstrating an understanding of amendment and maintenance of the registration dossier.

**Assessment (Tick appropriate box)**

Does this outcome form part of my current practice of pharmacy?

Yes ☐ No ☐

**IF YES,** on the basis of the evidence I have identified I can do this

7.6 **Pharmacovigilance.**

**A person who has achieved this outcome is capable of**

(a) Understanding Pharmacovigilance and the requirements locally and internationally in this regard.
(b) Reporting adverse reactions/events.
(c) Managing safety related complaints and recalls.
(d) Demonstrating an understanding of Risk Management.
(e) Demonstrating an ability to audit and to be audited.
(f) Demonstrating an understanding of Medical Information services.
(g) Understanding import and export requirements.
(h) Demonstrating an ability to communicate with Health Authorities.
(i) Demonstrating an ability to identify and supply principals with required information
(j) Handling complaints.
7.7 Promotional material and activities.

A person who has achieved this outcome is capable of

(a) Ensuring that all claims are supported by scientific data and do not go beyond the data as approved in the package insert.
(b) Complying with the SA Code of Practice for the Marketing of Health Products, and other relevant legislation.
(c) Checking if the packaging material meets the requirements of the regulations relating to labelling and the registration dossier.
(d) Checking the accuracy of the packaging material (i.e. no spelling errors and correct information and grammar).
(e) Understanding advertising and marketing of medicines and has the ability to approve artwork and certify promotional activities.
(f) Understanding advertising and marketing of medicines and has an ability to approve and certify, as applicable, promotional material and activities.

Assessment (Tick appropriate box)
Does this outcome form part of my current practice of pharmacy?

Yes ☐ No ☐

IF YES, on the basis of the evidence I have identified I can do this.

7.8 Ensure quality assurance in the registration of medicine

A person who has achieved this outcome is capable of

(a) Providing grammatically correct text and the correct scheduling status for printed packaging materials.
(b) Checking compliance of a medicine with the approved registration dossier.
(c) Interpreting Master Batch Documentation and Executed Batch Records.
(d) Releasing a medicine for sale.
(e) Compiling and maintaining Site Master Files.
(f) Assuring self-inspections.
(g) Assuring annual product review.
(h) Demonstrating an ability to handle deviations and change control.

Assessment (Tick appropriate box)
Does this outcome form part of my current practice of pharmacy?

Yes ☐ No ☐

IF YES, on the basis of the evidence I have identified I can do this.
7.9 Training the pharmacist intern in the participation in research to ensure the optimal use of medicines.

A person who has achieved this outcome is capable of

(a) Familiarising the pharmacist intern with the correct procedures in developing and managing an effective research design, collating and analysing data and drawing valid conclusions.

(b) Familiarising the pharmacist intern with the application of pharmaceutical skills and knowledge to apply research principles and current technology to collate and interpret data and present research findings according to scientific standards.

(c) Familiarising the pharmacist intern with the correct methods of relating pharmaceutical research findings to social, legal, and economic systems when drawing conclusions on health strategies from such findings.

(d) Familiarising the pharmacist intern with the principles of communicating research findings in a clear and scientific manner and to present these in scientific journals of international standing.

(e) Assisting the pharmacist intern in the self-assessment of their capabilities against determined unit standards.

(f) Providing guidance to the pharmacist intern in conducting and participating in research to ensure the optimal use of medicines.

(g) Providing guidance to the pharmacist intern to relate pharmaceutical, economic, social and governmental systems to research findings when providing input to health and drug policies.

(h) Assessing progress of the pharmacist intern and provide feedback.

(i) Assisting the pharmacist intern in solving relevant learning problems in conducting and participating in research to ensure the optimal use of medicines.

Assessment (Tick appropriate box)

Does this outcome form part of my current practice of pharmacy?

Yes ☐ No ☐

IF YES, on the basis of the evidence I have identified I can do this

8. COMPETENCY STANDARD EIGHT: FACILITATE THE DEVELOPMENT OF PHARMACEUTICAL PERSONNEL

Does this standard apply to me?
The standard applies to all pharmacists who play a role in the development of pharmacy personnel.

CAPABILITY AND OUTCOMES

A person who has achieved this standard is capable of Self-development and Development and management of personnel

The following outcomes of this capability should be demonstrated by the candidate:

8.1 Self-development.

A person who has achieved this outcome is capable of

| (a) | Assessing his or her knowledge, skills and values, and identify areas which require improvement to meet current practice needs and standards. |
| (b) | Identifying appropriate resources and activities, which are available for learning. |
| (c) | Applying new knowledge obtained from continuing professional development to my daily practice. |
| (d) | Modifying his or her behaviour in response to feedback from peers, co-workers or allied health professionals. |
| (e) | Understanding the need for planning as it relates to life-long learning. |
| (f) | Maintaining a portfolio of professional and personal development. |

Assessment (Tick appropriate box)

Does this outcome form part of my current practice of pharmacy?

Yes ☐ No ☐

IF YES, on the basis of the evidence I have identified I can do this

8.2 Development/management of personnel.

A person who has achieved this outcome is capable of

| (a) | Defining the accepted standards, policies and procedures that personnel follow. |
| (b) | Giving and receiving constructive feedback. |
| (c) | Acknowledging the roles of other team members. |
| (d) | Demonstrating patience, understanding, approachability, fairness and other relevant interpersonal skills. |
| (e) | Working as a member of a team. |
| (f) | Cooperating with others in cases of conflicting views and apply effective negotiation skills. |
| (g) | Determining the training requirements of learners against criteria (standard operating procedures and unit standards). |
| (h) | Ensuring development of on-the-job coaching and assessment against criteria. |
| (i) | Ensuring that evidence of competency is gathered by learners and collated in portfolios of evidence for tracking current learning acquired as well as the recognition of prior learning. (RPL). |
(j) Facilitating the competency of learners in the use of relevant terminology, equipment, and standard operating procedures required in pharmacy activities.

(k) Continuously updating portfolios of evidence with evidence of new competencies acquired.

(l) Facilitating problem solving during the learning process to ensure effectiveness and efficiency of development.

(m) Regularly providing feedback regarding learner development in the workplace.

(n) Evaluating team performance in key performance areas against agreed outcomes.

(o) Facilitating team training and development to ensure best practice.

(p) Establishing and maintaining effective lines of communication within the team.

9. COMPETENCY STANDARD NINE: PRACTISE PHARMACY PROFESSIONALLY AND ETHICALLY

Does this standard apply to me?

The standard is compulsory for all pharmacists

CAPABILITY AND OUTCOMES

A person who has achieved this standard is capable of working professionally in pharmacy practice, complying with legal requirement and code of conduct, practising pharmacy within a South African cultural framework and communicating effectively.

The following outcomes of this capability should be demonstrated by the candidate:

9.1 Work professionally in pharmacy practice.

A person who has achieved this outcome is capable of

(a) Evaluating information given for relevance, scientific correctness, accuracy and clarity.
(b) Interpreting written and verbal information and present it to the patient/caregiver in an appropriate verbal and/or written manner.
(c) Developing a trusting, professional relationship with individual patients.
(d) Being accessible to patients and communicating effectively with patients.
(e) Documenting his or her interventions and follow up on the outcome of interventions.
(f) Documenting communication with other health care providers.

Assessment (Tick appropriate box)
Does this outcome form part of my current practice of pharmacy?

Yes ☐ No ☐

IF YES, on the basis of the evidence I have identified I can do this

9.2 Practise pharmacy within a South African cultural framework.

A person who has achieved this outcome is capable of

(a) Demonstrating sensitivity to alternative approaches and customs in health care.
(b) Demonstrating sensitivity to alternative customs and approaches to health care during the research process.
(c) Explaining the pharmacist’s role in the health care system.
(d) Respecting confidentiality related to patients’ issues and information.
(g) Respecting the right of patients to make their own choice.

Assessment (Tick appropriate box)
Does this outcome form part of my current practice of pharmacy?

Yes ☐ No ☐

IF YES, on the basis of the evidence I have identified I can do this

9.3 Comply with legal requirements and code of conduct.
A person who has achieved this outcome is capable of

(a) Practising pharmacy in a manner consistent with the professional code of conduct.
(b) Fulfilling the legislative requirements pertaining to pharmacy practice including the control of medicine.
(c) Complying with legislative requirements for health and safety in the workplace.
(d) Developing a professional relationship with other health care providers.
(e) Understanding and applying legislative principles and current good pharmacy practice guidelines affecting the operation of pharmacies and the supply of medicine.
(f) Maintaining appropriate boundaries with patients, staff and other health professionals according to established ethical and professional practice guidelines.
(g) Maintaining knowledge of changing standards of professional practice and practise accordingly.

Assessment (Tick appropriate box)
Does this outcome form part of my current practice of pharmacy?
Yes ☐ No ☐
IF YES, on the basis of the evidence I have identified I can do this

9.4 Communicate effectively.

A person who has achieved this outcome is capable of

(a) Communicating effectively with patients face to face.
(b) Communicating effectively with patients by telephone.
(c) Communicating effectively with other health care professionals in person.
(d) Communicating effectively with other health care professionals by telephone.
(e) Listening actively
(f) Asking the questions that fit the situation.
(g) Communicating with patients to identify the level, content and final use of information in a culturally sensitive manner.

Assessment (Tick appropriate box)
Does this outcome form part of my current practice of pharmacy?

<tr>
<th>Assessment (Tick appropriate box) - In general, does <strong>Standard 10</strong> form part of my current practice of pharmacy?</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes ☐ No ☐</td>
<td></td>
</tr>
</tbody>
</table>

**IF YES,**

- ☐ I have assessed my competency in this standard and can provide evidence in all of the elements

- ☐ I have assessed my competency in this standard and will undertake CPD in the outcomes that I currently cannot provide evidence for, in order to meet all the requirements of this standard
